

Is tronscan.org legit? TrustSniffer's high-trust assessment: 100/100

tronscan.org

Verdict

100

OUT OF 100

HIGH TRUST

tronscan.org appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 70%.

What this site appears to be

Site appears to be a TRON blockchain explorer/dashboard offering transaction, token, staking and developer API information. Content and metrics correspond to an established ecosystem tool rather than a promotional investment or phishing page.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

tronscan.org

What tronscan.org served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

TRONSCAN is a TRON blockchain explorer and analytics dashboard that presents blocks, transactions, accounts, tokens, staking and governance data, ecosystem projects, and developer API services. Its apparent business model is that of a blockchain information and infrastructure utility, potentially supported by API access, advertising, promoted listings, and project-submission services rather than investment solicitation.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent explorer and dashboard function, with content and metrics aligned to the TRON ecosystem rather than a promotional investment or phishing operation. The available external reputation checks reported no malicious or suspicious detections and no blacklist hit, while the observed behavior showed no cloaking, clipboard manipulation, wallet-drainer activity, hidden forms, or suspicious inline scripts. The site's login/register and wallet-connection functionality therefore represents an interaction surface requiring ordinary care, but the supplied evidence does not indicate impersonation or phishing.

EVIDENCE

- The homepage identifies the service as “TRONSCAN | TRON BlockChain Explorer” and provides blockchain, token, analytics, governance, and developer-oriented navigation.
- The domain was registered on 2018-03-23 and is 8.42 years old.
- Historical records show 5,000 archive snapshots from 2018-05-19 through 2022-01-04, covering 5 tracked years.
- Available external checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist hit for the domain.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate blockchain data service, but the real-world operator identity is not independently verified. The reviewed site materials do not present a financial-services license number or licensing authority; given the site’s stated explorer, analytics, and API function, this is a disclosure and applicability point rather than evidence of a scam. A mid-level page-authority signal and the absence of an adverse broker-related match provide contextual support, but neither establishes legal status or regulatory authorization. The domain is registered through GoDaddy.com, LLC, and its transport security is valid.

EVIDENCE

- The domain registrar is GoDaddy.com, LLC.
- The site is served from AS13335, Cloudflare, Inc.
- The TLS certificate is issued by WE1 at DV validation level and is valid to 2026-10-07.
- The homepage and developer-oriented material describe explorer, analytics, and API functions without presenting a financial-services license number or named licensing authority.

What to Verify Next

Before credential or payment interactions, independently confirm the legal operator, applicable terms, and any regulatory obligations relevant to the intended use. Official support and account channels should be confirmed through an independent route, and any wallet or transaction request should be checked against the intended blockchain action before approval.

EVIDENCE

- The homepage contains login/register and connect-wallet controls, creating distinct credential and wallet-authorization surfaces.
- The site links to developer/API functionality and external ecosystem resources, so the identity of the relevant service operator should be confirmed independently before commercial or account-related reliance.

Summary Verdict

The website presents a **high-trust, low-risk posture** and the available evidence is consistent with an established, apparently legitimate site. The classification is strong, while the operator’s real-world identity remains independently unverified.

Infrastructure Integrity

Cloudflare CDN/WAF protection fronts the site with Cloudflare edge infrastructure, and observed resolution includes Cloudflare edge servers together with a potential origin candidate. This architecture mitigates direct exposure of the service infrastructure, but it is a protective control rather than proof of legitimacy.

Closing Assessment

Routine informational use is proportionate to the available evidence; before submitting credentials or making any payment-related commitment, ordinary independent checks of the operator, transaction purpose, and payment protections should be completed.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of tronscan.org.

- The request stayed on tronscan.org. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2028-03-23. CLEAR
- The earliest public archive of this site is from 2018-05-19. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about tronscan.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
