

Is trouserstreak.net safe? TrustSniffer's low-trust assessment: 25/100

trousterstreak.net

Verdict

25

OUT OF 100

LOW TRUST

trousterstreak.net is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-22 by automated analysis. Classification confidence 55%.

What this site appears to be

A minimal deployment/unavailable error page showing an ARN-like identifier; no interactive elements or monetization present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://trouserstreak.net/>

What trouserstreak.net served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

trouserstreak.net presents only a minimal “Deployment Unavailable” error page with an ARN-like identifier, no interactive functionality, and no visible products, services, monetization, or clearly stated business purpose.

Scam/Impersonation Risk

The site presents a **high-risk interaction posture** because external reputation checks identified a confirmed blacklist hit, three malicious detections, and one suspicious detection. These findings are materially more significant than the page-level scan, which found no login form, hidden form, wallet connection, external activity, or visible brand-impersonation content; the absence of functionality reflects an unavailable deployment rather than evidence of legitimacy. A separate set of abuse reports concerns a shared content-delivery IP and was discounted as infrastructure-related, so those reports should not be treated as site-specific attribution. No conflicting legal identities or direct brand-impersonation indicators were observed, but the blacklist and malicious detections remain unresolved contradictions.

EVIDENCE

- The external reputation record shows three malicious and one suspicious detections, with a confirmed blacklist result attributed to the domain.
- The homepage displays only “Deployment Unavailable” and an ARN-like identifier, with no login, payment, wallet, or other sensitive-interaction elements.
- Abuse reports concern IP address 64.29.17.1, identified as shared content-delivery infrastructure; the attribution was discounted because it was not specific to the site.

Regulatory Verification Notes

The operator identity remains unverified, and the available page provides no usable legal, ownership, licensing, or governance disclosure. The capture does not present a business model or any claimed regulatory authorization, so the site cannot presently establish who operates it or what legal basis would govern any future service. This is a substantive verification gap, separate from the external blacklist findings. The domain is also newly registered, which provides little operating history for assessing continuity or accountability.

EVIDENCE

- Domain registration records show creation on 2026-09-05 and an age of 0.05 years; registrar: DomainRegistry.com LLC.
- The homepage contains no company name, legal notice, terms, privacy disclosure, license claim, or registration number.
- The site is hosted on AS16509, Amazon.com, Inc.; its TLS certificate was issued by YR1 with DV validation and is valid to 2026-12-04.

What to Verify Next

Before any sensitive interaction, an independent registry check should confirm the legal operator and any license required for the service the site may later present. Contact and policy information should be validated through an independently sourced channel rather than relying solely on information that may appear in a future deployment. Any subsequent version of the site should also be reassessed because the present capture is only an unavailable error page.

EVIDENCE

- The current homepage provides no operator identity or regulatory disclosure that can be independently matched.
- No functional service, terms page, privacy page, or transaction workflow was available for verification.
- Independent confirmation is therefore required before credentials, payments, or other sensitive activity are considered.

Summary Verdict

The available evidence supports a **low-trust, sensitive-interaction-risk posture**. The site’s present state cannot establish a legitimate operating identity, while the confirmed external threat findings create a material unresolved risk that outweighs the benign characteristics of the unavailable page.

Infrastructure Integrity

The website is fronted by Vercel CDN/WAF infrastructure, with observed edge addresses on AS16509; the origin server was not observable in this analysis. This reduces direct exposure of the origin and is a mitigating technical control only, not evidence that the operator or content is legitimate.

EVIDENCE

- Hosted on AS16509, Amazon.com, Inc., US; observed edge IPs: 216.198.79.1 and 64.29.17.1.
- Vercel CDN/WAF protection was identified, with 2 observed edge IPs and 0 origin candidates.
- TLS uses issuer YR1, DV validation, and is valid to 2026-12-04.

Closing Assessment

Prospective users should limit activity to passive observation until the operator, applicable authorization, and the site’s intended service have been independently confirmed; login, credential submission, and financial interaction should not proceed in the current state.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat

Signals weighed against the site

- AbuseIPDB: 39 reports on hosting IP 64.29.17.1 (Vercel, Inc, Content Delivery Network), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of trouserstreak.net.

- The request stayed on trouserstreak.net. It was not redirected to another domain. CLEAR
- Registration is published under DomainRegistry.com LLC. CLEAR
- DNS for this domain is served by vercel-dns.com, across 2 name servers. NOTED
- The registration is paid up to 2027-09-05. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about trouserstreak.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
