

Is trustedshops.de legit? TrustSniffer's high-trust assessment: 100/100

trustedshops.de

Verdict

100

OUT OF 100

HIGH TRUST

trustedshops.de appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 55%.

What this site appears to be

Trusted Shops marketing and directory page describing buyer protection, trust seals, and aggregated shop reviews; lists many certified online shops and provides links to services and legal pages.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website presents itself as a German-language consumer trust and reviews platform for online shopping, offering buyer protection, shop certification seals, aggregated reviews, merchant services, a shop directory, and related support and legal resources. Its apparent business model is to help consumers assess online shops while selling certification and protection services to merchants and consumers.

Scam/Impersonation Risk

No contradictions were observed across the available evidence: there were no phishing, impersonation, malicious-content, or blacklist indicators, and the site's content is consistent with a consumer trust-and-reviews platform rather than a deceptive financial or credential-harvesting service. The homepage describes buyer protection, shop certification, reviews, a browser extension, and merchant services, including claims of more than 160 million reviews and approximately 25,000 certified shops; these claims are substantial marketing assertions but are not, by themselves, evidence of impersonation. Interaction testing showed dynamic page changes and some external network activity, but no hidden forms, externally submitted password forms, wallet operations, clipboard manipulation, or cloaking; these signals are therefore better treated as implementation complexity than as a fraud indicator.

EVIDENCE

- The homepage identifies buyer protection, Gütesiegel certification, shop reviews, merchant services, and a shop directory as the principal functions.
- The captured page contained no reported red flags, no suspected brand impersonation, and no sensitive form or phishing indicator.
- External reputation checks recorded zero malicious and zero suspicious detections, with no external malicious-site or blacklist finding.

Regulatory Verification Notes

Available evidence is consistent with an established, apparently legitimate consumer-services website, but the real-world operator identity is not independently verified. The site provides links to an Impressum, privacy information, cookies, accessibility information, platform terms, and buyer-protection cancellation information; however, no specific regulatory license claim or license number was observed. This is a verification point concerning disclosure and service scope, not an indication of scam activity. The independent broker-context check produced no match, which is a soft reputational signal rather than a licensing or regulatory determination.

The site also has a strong global traffic footprint and clean external reputation, supporting the conclusion that it is an established web service.

EVIDENCE

- The homepage links to “Impressum,” “Datenschutz,” “Cookies,” “Barrierefreiheit,” “AGB-Onlineplattform,” and buyer-protection cancellation information.
- The site is served from AS16509, Amazon.com, Inc. (AMAZON-02 - Amazon.com, Inc., US).
- Its TLS certificate is issued by Amazon RSA 2048 M04, uses Domain Validation (DV), and is valid through 2026-11-02T23:59:59+00:00.
- The site has a Tranco rank of 30287 and is within the top 1 million domains.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the legal operator named in the Impressum and ensure that the relevant consumer-protection, merchant-service, and payment terms correspond to that entity. Where a particular service or transaction could require authorization, its status should be checked with the applicable official registry rather than inferred from the site’s trust seals or review functions. For any purchase involving a listed shop, ordinary checks of the merchant’s identity, returns process, and payment-protection arrangements should be completed independently, and official support channels should be confirmed through an offline or separately sourced route.

EVIDENCE

- The homepage separates consumer and business areas and provides login access alongside merchant-service functions.
- The site includes dedicated legal and buyer-protection pages in its primary navigation.
- The captured page contains no password form and no untrusted form destination.

Summary Verdict

The overall posture is high trust and low risk, with the available evidence strongly consistent with an established, apparently legitimate website. No scam, phishing, impersonation, or other contradictory signal was identified, although operator identity remains independently unverified.

Infrastructure Integrity

The site uses AWS CDN/WAF protection, and all observed addresses were AWS edge infrastructure rather than identified origin hosts. This reduces direct exposure of the underlying service and is a mitigating technical control, although protective hosting alone does not establish operator legitimacy.

EVIDENCE

- AWS CDN/WAF protection was identified; observed edge addresses were 18.198.47.178, 63.179.156.66, and 63.182.20.74.
- All three observed edge addresses are associated with AS16509; no likely origin candidate was identified.

Closing Assessment

Normal browsing and ordinary platform use are proportionate to the assessed posture; before submitting credentials or payment information, independent checks of the relevant merchant identity, terms, and payment protections should still be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of trustedshops.de.

- The request stayed on trustedshops.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by awsdns-63.net, across 4 name servers. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about trustedshops.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
