

Is trustwallet.com legit? TrustSniffer's high-trust assessment: 90/100

trustwallet.com

Verdict

90

OUT OF 100

HIGH TRUST

trustwallet.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 65%.

What this site appears to be

Homepage for Trust Wallet, an established self-custody, multi-chain cryptocurrency wallet offering mobile and browser-extension products, swaps, purchases, staking, NFTs, dApps, tokenized assets, leveraged derivatives, prediction markets, security features, and developer resources.

Evidence status and limitations

Evidence completeness: UNKNOWN

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2005.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website is the official product presence for Trust Wallet, an established self-custody, multi-chain cryptocurrency wallet offering mobile and browser-extension access to digital-asset storage, transactions, Web3 applications, and related developer services.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or confirmed external threat designation were observed. The long-established domain and extensive archival record strongly support continuity, while the homepage presented no login form, hidden form, sensitive-data form, or untrusted form destination. One isolated malicious reputation-engine classification is not corroborated by the wider external assessment and does not materially undermine the convergent evidence of legitimacy.

- The domain registration record shows registration on 14 October 2005, making the domain approximately 20.81 years old.
- The web archive contains 2,109 snapshots spanning 10 November 2005 to 3 August 2026, representing 22 years of tracked history, with no suspicious repurposing or semantic drift identified.
- Homepage behavior testing found zero hidden forms, zero external posts, zero non-whitelisted external requests, and no detected wallet-drainer, clipboard-hijacking, cloaking, or suspicious inline-script behavior.
- External reputation checks found no confirmed phishing or broader threat designation; one engine classified the domain as malicious, while 60 classified it as harmless and 31 recorded no detection.

Regulatory Verification Notes

The homepage presents a broad financial-technology product surface: crypto purchases and sales, swaps, staking, NFTs, dApps, tokenized real-world assets, perpetual futures with leverage of up to 200x, and prediction-market access through Polymarket, Predict.fun, and Hyperliquid. These services carry market, counterparty, smart-contract, liquidation, and jurisdiction-specific regulatory risks despite the website itself being legitimate. No licensing claim, named licensing authority, or license number was identified in the supplied page content; this is a disclosure-verification matter rather than evidence of deception. The site also provides security, support, legal, corporate-information, and developer-resource pathways consistent with a mature service.

- The homepage identifies the service as a self-custody wallet and describes its leveraged derivatives and prediction-market integrations directly.
- The homepage names support, FAQ, contact, about, careers, press-kit, developer-documentation, and open-source Wallet Core resources.

- The domain is registered through MarkMonitor Inc., with the current registration term extending to 12 June 2030.
- The site's transport encryption uses a WE1-issued domain-validated TLS certificate, valid until 11 October 2026.

What to Verify Next

Institutional onboarding should establish which legal entity supplies each integrated financial function, because self-custody wallet software, asset purchasing, staking, derivatives, and third-party market access may involve different service providers. Relevant regulatory registries should be checked for any provider that holds assets, executes regulated transactions, or supplies jurisdiction-restricted services. Contractual due diligence should also confirm custody boundaries, fee allocation, dispute procedures, sanctions controls, and responsibility for losses arising from integrated protocols. Official support and software-distribution channels should be confirmed through independently sourced corporate references.

- The homepage describes the wallet as self-custodial, making the allocation of responsibility between wallet software and integrated providers material to due diligence.
- The homepage states that users can obtain personalized support and provides separate security and FAQ resources.
- The homepage advertises an open-source, mobile-focused wallet library and dedicated developer documentation.
- The analyzed homepage contained no credential-entry or other sensitive-data form requiring immediate remediation.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence across domain longevity, historical continuity, page quality, external reputation, technical security, and global traffic authority. No contradictory evidence was found that would call its identity or authenticity into question.

Infrastructure Integrity

The website is protected by Cloudflare's CDN and WAF, and all observed addresses were Cloudflare edge systems rather than the origin server. This architecture reduces direct origin exposure and provides a useful security mitigation, although protective infrastructure alone is not proof of legitimacy.

- The hosting infrastructure is served from AS13335 (Cloudflare, Inc.); observed edge addresses were 104.16.218.229 and 104.16.219.229.
- The observed hosting endpoint was located in the United States and identified as content-delivery-network infrastructure.

Closing Assessment

Normal interaction, including account login and standard use, is appropriate, subject to ordinary institutional controls for cryptocurrency transactions and integrated financial services.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of trustwallet.com.

- The request stayed on trustwallet.com. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2030-06-12. CLEAR
- The earliest public archive of this site is from 2005-11-10. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about trustwallet.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
