Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- Public web-archive history exists since 2007.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website at uasputnik.com is an online domain whose supplied evidence does not establish a reliably attributable business model, service offering, or operator identity; its apparent purpose therefore cannot be characterized with confidence from the available site material.

Scam/Impersonation Risk

The domain presents a **critical sensitive-interaction risk**. It is currently associated with a confirmed blacklist condition, with multiple external detections identifying malicious activity; this is a direct contradiction to a normal trust posture and outweighs the presence of basic network resolution or historical archive records. No conflicting legal-entity names or confirmed brand impersonation were identified in the supplied material, but operator identity remains unverified. The site should not be used for login, credential submission, financial activity, or downloading content.

EVIDENCE

- External reputation telemetry recorded 21 malicious detections and 1 suspicious detection among 27 evaluated results for the domain; Fortinet and Sophos were among the flagged vendors.
- The domain is marked as present on an external blacklist, with the associated protective action activated after the malicious-detection threshold was exceeded.
- Historical archive data records 3 snapshots spanning 2007–2008, covering 2 tracked years; the current registration record reports creation on 2026-09-09 and an age of approximately 0.06 years, indicating a material registration-history discontinuity requiring investigation.

Regulatory Verification Notes

Regulatory authorization and legal accountability are not established by the supplied evidence. The available material does not provide a verified regulated-entity status, registration source, or independently confirmed operator identity; the identity-verification status is unknown. This is a verification gap rather than a separate finding of fraud, but in combination with the confirmed blacklist condition it prevents reliance on the domain for regulated or financially sensitive engagement. No broker match was identified in the supplied third-party context.

EVIDENCE

- The current registration record identifies Gransy, s.r.o. as registrar and reports a registration date of 2026-09-09 with expiration on 2027-09-09.
- Archive records show first observation on 2007-11-03 and last observation on 2008-11-19, with 3 total snapshots across 2 tracked years.
- No verified regulatory source or independently confirmed legal-entity identity is present in the supplied evidence.

What to Verify Next

Any proposed engagement should first be suspended pending independent confirmation of the operator, the domain's current ownership, and any claimed authorization through the relevant official registry. Security teams should also confirm whether the domain or associated infrastructure appears in current incident-response records, and official contact channels should be validated through an independently obtained route rather than through the site itself.

EVIDENCE

- The domain's current registration record and its historical archive record require reconciliation before attribution can be treated as reliable.
- The confirmed blacklist condition and malicious-detection telemetry require current remediation or delisting evidence from authoritative security channels.
- The supplied material does not establish a verified regulatory source or operator identity against which claims can be checked.

Summary Verdict

The website has a critical trust posture and is unsuitable for sensitive interaction. The available evidence is materially inconsistent with treating the domain as an established, verified, or dependable online service.

Infrastructure Integrity

The website is protected by Cloudflare CDN/WAF infrastructure, which limits direct exposure of the origin and provides a mitigating defensive layer, but this protection does not validate the site's legitimacy or offset the external threat detections. The observed edge address resolves through AS154383, associated with ZWS-AS-AP - ZORNTech WEB SOLUTIONS, BD, in Türkiye; no origin candidate was observed.

EVIDENCE

- Observed hosting edge: AS154383, ZWS-AS-AP - ZORNTech WEB SOLUTIONS, BD; edge IP 176.53.159.40.
- CDN/WAF provider: Cloudflare; 1 unique observed IP, 1 edge IP, and 0 likely origin IPs.
- The infrastructure registry is RIPE NCC and the observed country is TR.

Closing Assessment

Prospective users and organizations should refrain from sensitive interaction with this domain unless and until independent ownership, remediation, and authorization checks produce authoritative, current confirmation.

Written analysis generated 2026-10-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by external reputation, hosting and network.

01 External reputation

- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

02 Hosting and network

- The hosting and network setup shows a moderate level of risk indicators.

Hosting and network rule:DNS_RISK_MED

- The domain is young and has almost nothing else set up around it.

Hosting and network rule:DNS_SPARSE_YOUNG_DOMAIN

- The domain is young and has a very small footprint on the network.

Hosting and network rule:DNS_LOW_FOOTPRINT_YOUNG_DOMAIN

- Several separate hosting and network checks came back negative.

Hosting and network rule:DNS_MULTIPLE_NEGATIVE_SIGNALS

Identity verification

StatusUNKNOWN

Identity score50/100

Identity verification confidence30%

- AI page analysis unavailable (page captured; identity not AI-verified)

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of uasputnik.com.

- Registration is published under Gransy, s.r.o.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-09-09. NOTED
- The earliest public archive of this site is from 2007-11-03. CLEAR
- It is hosted on ZWS-AS-AP, from a server in TR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about uasputnik.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
