Full analysis

Overview

The website currently presents a human-verification interstitial requiring a CAPTCHA, JavaScript, and Google Translate to be disabled before access; its apparent purpose is to control automated traffic, while the underlying service is not visible from the accessible page.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or conflicting-identity indicators were observed. The CAPTCHA page contains no login form, payment request, hidden sensitive form, wallet interaction, suspicious scripts, or external form destination, and behavioral testing found no cloaking or clipboard manipulation. The site therefore presents as legitimate and established, although the interstitial limits direct assessment of the underlying service.

- The homepage displays a human-verification challenge and no credential, payment, or wallet form.
- Behavioral analysis recorded two successful runs, no hidden forms, no suspicious inline scripts, and no cloaking.
- The domain was registered on 2012-01-17 and is approximately 14.55 years old; archival records contain 189 snapshots across 11 tracked years, from 2016-07-16 to 2026-05-15.

Regulatory Verification Notes

The accessible page provides no company identity, licensing claim, registration number, or substantive business description, so regulatory status cannot be established from the visible content. This is a transparency item for confirmation rather than evidence of misconduct. The domain is registered through GANDI, and its clean external reputation and established online presence support the overall legitimacy assessment.

- The homepage contains only human-verification instructions and no legal or licensing disclosure.
- Domain registrar: GANDI; expiration date: 2027-01-11.
- TLS is DV-validated, issued by Amazon RSA 2048 M04, and valid through 2027-02-25.

What to Verify Next

After access is restored, confirm the service's legal entity, applicable licensing or registration, terms, and official support channels through independently sourced records. Any account or transaction review should be based on the substantive pages presented after the verification step.

- The homepage currently withholds the underlying service description behind the CAPTCHA.
- No legal, licensing, or business-model information is visible on the accessible page.

Summary Verdict

The website has a high-trust posture supported by long-term domain continuity, clean reputation signals, valid transport security, and benign observed behavior. No contradictory indicators were identified, and normal interaction—including account login and standard use—is appropriate.

Infrastructure Integrity

The site is protected by Amazon CloudFront CDN/WAF infrastructure. Observed edge addresses resolve to AS16509, operated by Amazon.com, Inc.; no origin candidate was exposed, providing a mitigating layer against direct origin exposure.

Closing Assessment

Normal use is appropriate, with substantive legal and service details best reviewed once the human-verification interstitial has been cleared.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about unisportstore.fr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
