Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is an established Russian information and analytical news publisher presenting national, international, and regional reporting across politics, economics, real estate, society, science, and lifestyle, with an apparent business model based on advertising, commercial placements, special projects, and audience engagement.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or deceptive financial solicitation were observed. The content is consistent with a mature news operation, and the domain's long operating history, strong global traffic footprint, and predominantly clean external reputation support the conclusion that it is legitimate. A single unconfirmed suspicious classification is an isolated reputational signal and is outweighed by the absence of malicious detections, reported abuse, or matching threat signatures.

- The homepage contained substantial current-news content and showed no brand-impersonation indicators or reported fraud-related content flags.
- Page inspection found no login form, hidden form, sensitive-data form, externally submitted password form, cryptocurrency wallet integration, or clipboard-hijacking behavior.
- External reputation checks recorded 0 malicious classifications, 1 suspicious classification, no malicious safe-browsing finding, 0 abuse reports, and 0 matching malicious signatures.
- The domain was registered in 2016 and is approximately 10.36 years old; its global traffic rank was 7,444 at assessment time.

Regulatory Verification Notes

The homepage provides a coherent publisher identity through media-registration information, ownership and editorial-leadership disclosures, a physical address, contact details, advertising contacts, and links to legal and policy materials. These disclosures are appropriate to the site's function as a news publisher; no financial or investment service is presented that would make financial-services licensing relevant. Registration through Regional Network Information Center, JSC dba RU-CENTER further supports an established administrative footprint.

- The homepage identifies the operation as a registered news publisher and presents publisher, ownership, and editorial-management information.
- The homepage supplies a physical address and separate editorial and advertising contact channels.

- Legal and policy links are available from the homepage for review of the publisher’s operating terms and data practices.
- The assessed content was categorized as news/media, with no cryptocurrency, brokerage, investment, or regulated financial-product offering identified.

What to Verify Next

For institutional reliance, content syndication, advertising procurement, or other contractual engagement, the counterparty’s current publisher-registration entry and signing authority should be confirmed through the relevant official records. Commercial terms, invoicing details, and authorized contact channels should also be validated independently before funds or proprietary material are exchanged.

- The site describes revenue-generating activities that include advertising, commercial placements, and special projects.
- The homepage offers newsletter-driven audience engagement alongside regional-content selection and a cookie-consent notice.

Summary Verdict

The website presents a legitimate, established, and trustworthy media operation. Its identity disclosures, mature publishing activity, external standing, and technical controls converge on a high-confidence trust posture with no observed contradictions. Normal interaction, including account login and standard use where offered, is appropriate.

Infrastructure Integrity

The site uses CDN/WAF protection, with two observed edge addresses and one potential origin candidate. Its primary service endpoint is hosted in Russia by Storm Networks LLC; the protective layer mitigates direct exposure but is not treated independently as proof of legitimacy.

- Hosting infrastructure served the site from AS43298 (StormNetworks — Storm Networks LLC, RU).
- CDN/WAF edge infrastructure included 13.248.169.48 and 76.223.54.146 on AS16509.
- The site’s organization-validated TLS certificate was issued by GlobalSign RSA OV SSL CA 2018 to LLC Sibirsko-Uralskaya mediakompaniya and was valid through 2026-08-24.

Closing Assessment

Prospective users may engage with the site normally, while organizations entering commercial or contractual relationships should apply their standard counterparty and payment-control procedures.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [ura.news](#).

- The request stayed on [ura.news](#). It was not redirected to another domain. CLEAR
- Registration is published under Regional Network Information Center, JSC dba RU-CENTER. CLEAR
- DNS for this domain is served by nic.ru, across 5 name servers. NOTED
- The registration is paid up to 2027-03-28. NOTED
- It is hosted on StormNetworks, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [ura.news](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
