

Is usdebtclock.org legit? TrustSniffer's high-trust assessment: 100/100

usdebtclock.org

Verdict

100

OUT OF 100

HIGH TRUST

usdebtclock.org appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 55%.

What this site appears to be

A real-time informational dashboard presenting large collections of U.S. national debt, fiscal, economic, and demographic figures. The supplied page text contains no login, payment request, investment promotion, or sensitive-data entry flow.

Evidence status and limitations

Evidence completeness: UNKNOWN

- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is an established informational dashboard that presents real-time U.S. national-debt, federal fiscal, economic, population, and demographic statistics through continuously updating counters, without offering investments, transactions, or an evident sensitive-data collection flow.

Scam/Impersonation Risk

No identity, phishing, impersonation, or other contradictory signals were observed. The homepage operates as a public-information resource rather than a financial solicitation: it presents economic statistics without payment requests, investment-return claims, cryptocurrency features, wallet connections, or credential-capture mechanisms. Its long-established domain and clean external reputation materially support the conclusion that the site is legitimate.

- The domain was registered through GoDaddy.com, LLC in 2008 and is approximately 17.75 years old; registration currently extends to 2030.
- The homepage contains no forms, login interface, hidden input mechanism, or untrusted form destination.
- External threat-reputation checks recorded no malicious or suspicious classifications, phishing indication, reported infrastructure abuse, or signature matches.
- Automated interaction with the homepage completed successfully without cloaking, clipboard manipulation, wallet activity, suspicious scripts, or external data submissions.

Regulatory Verification Notes

The site's apparent function is publication of economic and public-debt information, not delivery of a brokerage, investment, payment, or other regulated financial service. The captured content makes no licensing claim, and no regulatory authorization is necessary to substantiate the limited informational purpose observed. Its established global audience footprint and conventional, authenticated transport infrastructure reinforce its standing as a mature content service rather than a newly created financial proposition.

- The homepage describes and displays public-debt, government-revenue, spending, economic, and demographic data without advertising a regulated financial product.
- The domain holds a global traffic rank of 36,951, placing it within the top one million sites.
- The site is served from AS32244 (Liquid Web, L.L.C, US).
- The site's transport encryption uses a YR2-issued domain-validated TLS certificate, valid to 2026-09-03.

What to Verify Next

Organizations intending to rely on the displayed figures for regulated reporting, investment research, or formal decision-making should reconcile them with the relevant primary government publications and document the dashboard’s update timing and calculation methodology. This is a data-governance control concerning statistical reliability, not a concern about website legitimacy.

- The captured homepage presents numerous real-time counters and percentage measures, including national debt, fiscal aggregates, and population statistics.
- The analyzed page content did not expose source links, explanatory methodology, a meta description, or structured metadata establishing how the displayed values are calculated.

Summary Verdict

The evidence converges on a legitimate, established, and trustworthy informational website with no observed contradictions or abusive interaction patterns. Normal interaction, including account login and standard use where such functionality is available, is appropriate.

Infrastructure Integrity

The site resolves directly to a single U.S.-hosted address that appears to be the origin server; no CDN or WAF layer was detected. This is a conventional direct-hosting configuration, and the available infrastructure evidence does not indicate suspicious routing or origin behavior.

Closing Assessment

Prospective users may engage with the site normally, while institutions using its statistics as authoritative inputs should apply their standard independent data-validation controls.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of usdebtclock.org.

- The request stayed on usdebtclock.org. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by wiredtree.com, across 2 name servers. NOTED

- The registration is paid up to 2030-11-03. CLEAR
- It is hosted on LIQUIDWEB, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about usdebtclock.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
