

Is userhotels.org a scam? TrustSniffer's high-risk assessment: 0/100

userhotels.org

Verdict

0

OUT OF 100

CRITICAL RISK

userhotels.org shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-18 by automated analysis. Classification confidence 55%.

What this site appears to be

A short landing page titled 'Adobe Acrobat — System Check' that reports device compatibility (Windows required) and performs a redirect to an installer. No forms, payment requests, or credential prompts are present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	15 flagged it VirusTotal	RISK
Google Safe Browsing	Not listed Google	CLEAR
Abuse reports on the host	0 reports AbuseIPDB; shared hosting inflates this count	NOTED
Domain age	11 days old Most scam domains are under a year old	RISK
Web archive	Never archived No public history of this site	WATCH
Certificate	Encrypted connection Issued by WE1	NOTED

The page as captured

<https://userhotels.org/>

What userhotels.org served when TrustSniffer captured it on 2026-09-18. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a short landing page titled “Adobe Acrobat — System Check” that checks whether a visitor is using a Windows desktop and, when the condition is met, redirects the visitor toward an installer; its apparent purpose is software-download distribution rather than an identifiable business or service portal.

Scam/Impersonation Risk

The site presents a confirmed external reputation contradiction: multiple security assessments classify the domain as malicious or suspicious, and the domain is recorded on external blacklists. This outweighs the otherwise limited page-level indicators, which show no login form, payment request, credential prompt, or sensitive data-collection interface. The page’s Adobe Acrobat branding, automatic installer redirect, and lack of identifiable business context create a download-integrity concern, although the available evidence does not establish a confirmed brand impersonation or conflicting legal identity.

EVIDENCE

- External reputation checks recorded 15 malicious detections and 3 suspicious detections, with Fortinet and Sophos among the flagged vendors; the domain was also recorded as blacklisted.
- The homepage is classified as a download gate or redirector and automatically redirects visitors toward an installer.
- The domain was registered on 2026-09-05 and is approximately 0.03 years old.
- The homepage contains no forms, payment requests, login fields, or credential prompts.

Regulatory Verification Notes

The available evidence does not independently verify the real-world operator, and governance and ownership transparency are insufficient for a sensitive interaction. The landing page does not present a corporate identity, licensing claim, registration number, or accountable service description; because the observed model is a software-download redirect rather than a disclosed regulated financial service, this is primarily an identity and accountability gap rather than a licensing conclusion. A valid transport certificate and mainstream hosting infrastructure confirm technical deployment only; they do not establish operator legitimacy.

EVIDENCE

- The site's identity verification status is unverified, with no independent identity signals recorded.
- The site makes no license claim and provides no license authority or license number.
- Hosted on AS13335 through CLOUDFLARENET — Cloudflare, Inc., US.
- TLS certificate issued by WE1 with DV validation, valid to 2026-12-04.

What to Verify Next

Before any download, the installer should be obtained through Adobe's independently verified official distribution channel rather than through this redirect. The downloaded file should be checked for a valid publisher signature and compared with a trusted vendor-provided hash; endpoint security should inspect the file before execution. Any stated operator, support channel, or business affiliation should be confirmed through an independent source, and no account credentials or payment details should be entered in connection with this page.

EVIDENCE

- The homepage states that the installer is available only for Windows 10 and 11 desktop devices.
- The page displays "Redirecting you to the installer" and uses an automatic redirect.
- The page provides no visible business identity, licensing information, or accountable service description.
- Behavioral observation recorded no external form submissions, wallet activity, clipboard manipulation, or hidden forms, but this does not validate the redirected installer.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. The confirmed external threat detections and blacklist status are decisive, while the page's limited content and unverified operator identity provide insufficient grounds for trust.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer against direct exposure of the hosting environment, but it is not evidence of legitimacy. All observed addresses were CDN edge servers, and the origin server was not observable in this analysis.

EVIDENCE

- Observed edge infrastructure included 104.21.22.227, 172.67.207.141, 2606:4700:3030::ac43:cf8d, and 2606:4700:3035::6815:16e3.
- All four observed addresses were associated with AS13335 and Cloudflare edge infrastructure.
- The infrastructure assessment identified no observable origin-server candidate.

Closing Assessment

The appropriate disposition is to avoid sensitive interaction with the site and obtain any purported software through a separately authenticated official distribution path, with endpoint security review before execution.

Written analysis generated 2026-09-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of userhotels.org.

- The request stayed on userhotels.org. It was not redirected to another domain. CLEAR
- Registration is published under Cloudflare, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-09-05. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about userhotels.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
