Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website presents VerTV, a regional Brazilian telecommunications provider offering residential and business subscription-television services over fiber-optic infrastructure. Visitors can compare clearly priced monthly channel packages, access the customer area, obtain billing assistance, consult frequently asked questions, and locate dedicated sales, financial, and debt-negotiation channels.

Scam/Impersonation Risk

No identity contradictions, impersonation, phishing activity, or other substantive fraud indicators were observed. The public pages follow an ordinary subscription-service model, while behavioral testing found no hidden forms, credential diversion, cloaking, suspicious scripts, or external data submissions. Its long historical footprint and clean standing across the evaluated public threat-intelligence sources strongly support continuity rather than opportunistic or deceptive use.

- The homepage displayed no sensitive form, hidden form, untrusted form destination, or phishing-oriented login mechanism.
- Interactive testing recorded zero external XHR requests, zero external posts, zero suspicious inline scripts, and no cloaking.
- Domain records identify Computer Line Campos Informatica Ltda. as the owner; the WHOIS creation date is 2004-01-10, representing approximately 22.58 years of registration history.
- Public archives contain 164 snapshots from 2001-04-06 through 2026-05-19, spanning 26 tracked years, with no suspicious repurposing or semantic drift identified.

Regulatory Verification Notes

The supplied website content does not establish a licensing claim, regulator, registration number, or independently verified authorization. For a conventional regional subscription-television provider, this is a disclosure-verification matter rather than evidence of deception, particularly because no conflicting legal identities or governance concerns appear in the assessment. The absence of a match in the supplied broker-intelligence dataset has no meaningful regulatory implication for this non-broker business.

- The homepage identifies the service under the VerTV name and provides television-service, billing, customer-service, directions, and FAQ functions, but the supplied page evidence contains no licensing or regulatory identifier.
- The registered owner is stated in the domain record, and no competing legal-entity name was found across the supplied identity evidence.
- The site's transport encryption uses a DV certificate issued by Go Daddy Secure Certificate Authority - G2, valid until 2027-02-08.

- The homepage links to established social-presence channels on Facebook and Instagram.

What to Verify Next

For procurement, material contracting, or enterprise onboarding, the prospective counterparty should confirm the contracting entity against corporate records and obtain any sector authorization applicable to the specific service and locality. Commercial terms, package availability, installation coverage, billing arrangements, and official support channels should also be confirmed directly before commitment.

- The homepage advertises the Golden HD package at R\$129.90 per month, Essential HD at R\$59.90, and Premium HD at R\$159.90, making current price and package confirmation relevant to contracting.
- The same page states that service is delivered through fiber-optic connectivity and describes an expanding regional network, supporting a location-specific coverage check.
- Dedicated homepage telephone channels are published separately for customer service, finance, sales, and two debt-negotiation scenarios.

Summary Verdict

The website is a legitimate, established, and trustworthy online presence with strong convergence across identity, provenance, reputation, page content, and observed behavior. No contradictory risk signals were identified, and normal interaction—including account login and standard service use—is appropriate.

Infrastructure Integrity

The website resolves directly to two likely origin addresses without a CDN or WAF intermediary. It is served from AS52993, operated by Ver Tv Comunicacoes LTDA in Brazil; the confirmed server address is 177.47.128.60. This direct, organization-aligned hosting posture is technically coherent, although transport security and infrastructure alignment remain supporting controls rather than standalone proof of legitimacy.

Closing Assessment

Prospective customers may use the website normally, with routine contractual due diligence appropriate to any telecommunications subscription or enterprise engagement.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of vertv.com.br.

- The request stayed on vertv.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 128.2, across 2 name servers. NOTED
- The registration is paid up to 2027-01-10. NOTED
- The earliest public archive of this site is from 2001-04-06. CLEAR
- It is hosted on AS52993, from a server in BR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about vertv.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
