

Is video.ibm.com legit? TrustSniffer's high-trust assessment: 90/100

video.ibm.com

Verdict

90

OUT OF 100

HIGH TRUST

video.ibm.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-07-17 by automated analysis. Classification confidence 55%.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is IBM Video Streaming, a content-service site that presents online video-streaming functionality to visitors and appears intended to support hosted or delivered video content under the IBM Video branding. Its presentation is consistent with an established service, although the real-world operator identity is not independently verified by the available evidence.

Scam/Impersonation Risk

No phishing, impersonation, malicious-reputation, or conflicting-identity contradictions were observed. The homepage and supporting behavioral telemetry are consistent with a stable content site: no hidden forms, external password forms, wallet-drainer behavior, clipboard hijacking, cloaking, or suspicious inline scripts were detected. Automated analysis did flag DOM mutations and a final-destination mismatch as suspicious behavioral indicators, but these were not accompanied by a broader abuse pattern and do not alter the high-trust assessment. The IBM Video Streaming presentation remains evidence-consistent rather than independently proving the operator's real-world identity.

EVIDENCE

- Domain registration records show registration in 1986, supporting a long-established domain history.
- External reputation checks recorded zero malicious and zero suspicious detections, with no phishing-reputation hit.
- The homepage completed two successful behavioral runs; no hidden forms, external password forms, wallet activity, or clipboard-write activity was observed.

Regulatory Verification Notes

The available page evidence identifies the service as IBM Video Streaming but does not independently establish the legal operating entity, licensing position, or any sector-specific authorization. This is a verification matter rather than evidence of deception. The surrounding technical and reputational signals are strongly consistent with an established website: the domain uses CSC Corporate Domains, Inc. as registrar, the transport certificate is an extended-validation certificate issued by DigiCert, and server telemetry identifies IBM Cloud infrastructure. No matching third-party broker-reputation record was identified; that contextual signal is not a legal or regulatory determination.

EVIDENCE

- Domain registration: registered 1986-03-19 and approximately 40.42 years old; registrar: CSC Corporate Domains, Inc.
- Server telemetry: hosted on AS36351 (SOFTLAYER - IBM Cloud, US).
- TLS certificate: issued by DigiCert EV RSA CA G2, validation level EV, valid to 2027-02-21 23:59:59 UTC.

What to Verify Next

Before credential or payment interactions, an independent check should confirm the responsible legal entity through an authoritative corporate or sector registry, where relevant. The applicable terms, service conditions, refund or cancellation provisions, and payment protections should also be reviewed, with official support channels confirmed through an independent route rather than relying solely on page-provided contact information.

EVIDENCE

- The homepage provides the IBM Video Streaming service presentation but does not independently resolve the operator's legal identity.
- The available page evidence leaves licensing and authorization status to be confirmed through the relevant registry.
- The technical assessment recorded no hidden credential forms or wallet-sensitive interaction during the observed homepage sessions.

Summary Verdict

The overall posture is high trust and low risk, with convergent evidence supporting an established, apparently legitimate website and no observed scam or impersonation contradictions. Confidence is moderated only because the real-world operator identity has not been independently verified.

Infrastructure Integrity

The site is protected by Akamai CDN/WAF infrastructure, with the hosting layer identified as AS16625 (Akamai Technologies, Inc., US); Cloudflare edge infrastructure was also observed. The observed addresses were CDN edge addresses rather than direct origin candidates, which reduces direct exposure of the underlying service and is a mitigating infrastructure signal, not proof of legitimacy.

Closing Assessment

Ordinary use is proportionate to the assessed posture, while independent checks of operator identity, applicable service terms, and payment protections should precede any credential or payment commitment.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNKNOWN
Identity score	50/100
Identity verification confidence	30%

- AI page analysis unavailable (page captured; identity not AI-verified)

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of video.ibm.com.

- The request stayed on video.ibm.com. It was not redirected to another domain. CLEAR
- Registration is published under CSC Corporate Domains, Inc.. CLEAR
- DNS for this domain is served by nsone.net, across 4 name servers. NOTED
- The registration is paid up to 2027-03-20. NOTED
- It is hosted on SOFTLAYER, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about video.ibm.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
