

Is virginmediao2.co.uk legit? TrustSniffer's high-trust assessment: 100/100

virginmediao2.co.uk

Verdict

100

OUT OF 100

HIGH TRUST

virginmediao2.co.uk appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 75%.

What this site appears to be

Official marketing page describing Virgin Media and O2 Volt bundle offers: boosted broadband speeds up to 1Gbps, WiFi guarantee, doubled O2 mobile data, roaming benefits, bundle pricing and legal terms. Targets new and existing customers with eligibility and activation instructions.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is a corporate Virgin Media O2 marketing site presenting Volt bundle offers that combine broadband, mobile data, WiFi benefits, roaming, television, and SIM services through a recurring consumer subscription model.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other contradictory signals were observed. The homepage presents a coherent telecommunications proposition, including broadband speed upgrades, mobile-data benefits, roaming, eligibility routes, and contractual offer information rather than an anomalous or investment-oriented scheme. Behavioral testing identified two suspicious inline scripts, but found no hidden forms, password-submission forms, wallet activity, clipboard manipulation, cloaking, or untrusted destinations; this isolated scripting observation does not contradict the overall low-risk assessment. The site's external reputation checks were clean, and its established traffic footprint is consistent with a genuine consumer-facing service. The real-world operator identity remains independently unverified, so the site's apparent legitimacy should not be treated as independently proven.

EVIDENCE

- Homepage behavior: two suspicious inline scripts were observed; no hidden forms, password-external forms, wallet-provider activity, clipboard writes, or cloaking were detected.
- Homepage content: the page is titled "Virgin Media O2 | Boosted Volt Bundles - Official Site" and contains substantial telecommunications marketing content with no identified fraud indicators.
- Domain and historical continuity: registered in 2021, approximately 4.82 years old; 292 archive snapshots spanning 2021–2026, covering 6 years.
- External reputation: malicious detections 0, suspicious detections 0, Google Safe Browsing malicious status false, and Tranco rank 24961.

Regulatory Verification Notes

The site describes a conventional telecommunications subscription business, with recurring monthly broadband and mobile charges, bundle upsells, optional add-ons, eligibility conditions, pricing, minimum-term information, and legal terms. No licensing or registration number is claimed in the supplied site content; for a consumer telecom provider, this is a disclosure point requiring independent confirmation rather than evidence of wrongdoing. A separate broker-reputation dataset produced no match, which is contextual and does not

establish regulatory status. Available evidence is consistent with an established, apparently legitimate website, but the operator's real-world identity and regulatory position are not independently verified.

EVIDENCE

- Homepage: Volt offers include broadband speeds up to 1Gbps, a WiFi guarantee, doubled eligible O2 mobile data, roaming in 75 destinations, bundle pricing, eligibility, and activation information.
- Business-model assessment: recurring broadband and mobile subscriptions with contractual terms and minimum terms disclosed; content classified as corporate telecommunications with low risk.
- Hosting: served from AS396982, Google Cloud Platform, Google LLC, US.
- Transport security: TLS certificate issued by GlobalSign GCC R3 DV TLS CA 2020, validation level DV, valid to 2026-12-02.

What to Verify Next

Before credential or payment interactions, an independent check should confirm the legal entity offering the service, the applicable telecom registration or authorisation position, and the official customer-service channels. Contract terms, cancellation rights, minimum-term obligations, return or equipment provisions, and payment protections should be reviewed through independently sourced customer-service or regulatory channels rather than relying solely on marketing-page claims. Any account or payment flow should remain within the expected official service path and should not request information unrelated to the selected telecom service.

EVIDENCE

- Homepage structure: the site provides separate routes for new customers, existing Virgin Media customers, existing O2 customers, and customers of both services.
- Page type: the captured page is a marketing/product page rather than a credential-harvesting or financial-services interface.
- Transaction surface: no sensitive form or untrusted form destination was detected during behavioral testing.

Summary Verdict

The overall posture is **high trust and low risk**, with evidence converging on an established, apparently legitimate corporate website and no observed scam or impersonation contradictions. The classification supports normal browsing and ordinary service evaluation, while independent operator identity remains unverified.

Infrastructure Integrity

The site resolves to one IP address with one likely origin candidate and no identified CDN edge. Its Google Cloud hosting and valid mainstream TLS deployment provide a technically credible and mitigating infrastructure context, but hosting configuration alone does not establish legitimacy.

Closing Assessment

Ordinary use is proportionate to the assessed posture, provided that independent merchant-identity, contractual, and payment-protection checks are completed before submitting credentials or making payments.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of virginmediao2.co.uk.

- The request stayed on virginmediao2.co.uk. It was not redirected to another domain. [CLEAR](#)
- The earliest public archive of this site is from 2021-10-18. [CLEAR](#)
- It is hosted on GOOGLE-CLOUD-PLATFORM, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about virginmediao2.co.uk at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
