

Is vyaparapp.in legit? TrustSniffer's high-trust assessment: 100/100

vyaparapp.in

Verdict

100

OUT OF 100

HIGH TRUST

vyaparapp.in appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-04 by automated analysis. Classification confidence 75%.

What this site appears to be

Vyapar App product page promoting GST billing and invoicing software for small businesses, including customizable A4, landscape, thermal, retail, and café bill templates. The captured HTML contains extensive VWO experimentation and analytics code but no evident sensitive-data collection or malicious behavior.

Evidence status and limitations

Evidence completeness: UNKNOWN

- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website presents Vyapar, an established software-as-a-service platform offering GST billing, invoicing, customizable bill templates, printing formats, and related business-management tools for small businesses, apparently monetized through subscriptions or premium functionality supported by product trials.

Scam/Impersonation Risk

No identity contradictions, phishing behavior, brand impersonation, malicious reputation findings, or deceptive financial claims were observed. The registered organization name aligns with the Vyapar branding, while the domain's long operating history and continuous archival record support stable provenance rather than recent repurposing. The observed page contained no login form, hidden form, sensitive-data form, wallet integration, clipboard manipulation, or cloaking behavior.

- Domain-registration records identify the organization as Vyapar and the registrar as GoDaddy.com, LLC; registered 16 December 2015 (~10.64 years old), with expiration on 16 December 2028.
- The historical record contains 434 archive snapshots spanning 2 November 2016–1 August 2026 (11 years tracked), with no suspicious repurposing or established semantic drift.
- The homepage presents a consistent Vyapar-branded business-software proposition and produced no page-level fraud indicators.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no phishing indication, no external threat-list match, and no reported abuse against the assessed infrastructure.

Regulatory Verification Notes

Vyapar is presented as general business billing and invoicing software, not as a broker, investment platform, payment institution, or other regulated financial service. The homepage makes no licensing claim, and the evidence does not establish that a sector-specific financial authorization is required for the described SaaS activity. Its concrete offering includes customizable A4, landscape, and thermal invoice designs, together with retail and café receipt templates; these are consistent with the stated small-business use case rather than a regulated financial proposition. No adverse broker-reputation match was identified.

- The homepage identifies its subject as “GST Billing Software for Small Businesses” and describes invoice customization using business details, logos, fonts, and colours.
- The product page offers Executive, Tally, Advanced GST, Classic, Retail Receipt, and Cafe Receipt templates through trial-oriented calls to action.

- The site's transport encryption uses a WE1-issued DV TLS certificate, valid to 7 October 2026.
- The assessed homepage returned stable successful responses and exposed no sensitive, hidden, or externally submitted password form.

What to Verify Next

Before entering a paid subscription or deploying the software into a controlled business environment, the prospective customer should review the applicable contract, privacy terms, data-processing provisions, retention practices, cancellation conditions, and support arrangements. An enterprise deployment should also assess whether invoice and customer data handling meets the organization's jurisdictional, tax-record, access-control, backup, and vendor-risk requirements. Official support and payment channels should be confirmed through the site's published corporate materials.

- The homepage indicates likely subscription or premium-feature monetization through software trials, making commercial terms relevant before purchase.
- The captured page uses VWO for experimentation and Google Analytics 4 for analytics, supporting a review of cookie and telemetry disclosures.
- The application-facing page is delivered through WordPress and performs A/B-testing-driven DOM modification, which is consistent with marketing optimization but relevant to enterprise privacy review.
- The homepage contained no transaction or enrollment form from which contractual, payment, or data-processing conditions could be evaluated.

Summary Verdict

The website is a legitimate, established, and trustworthy business-software service. Its coherent identity, sustained provenance, clean external reputation, mature content, and absence of contradictory or abusive behavior provide strong convergent support for normal interaction, including account login and standard use.

Infrastructure Integrity

The website is protected by Cloudflare's CDN/WAF, with all four observed addresses operating as edge endpoints and no directly exposed origin candidate. This reduces direct origin exposure and provides a mainstream protective layer, although infrastructure protection is a mitigating control rather than independent proof of legitimacy.

- The hosting infrastructure is served from AS13335 (CLOUDFLARENET — Cloudflare, Inc., US).
- Four Cloudflare edge addresses were observed—two IPv4 and two IPv6 endpoints—with no origin-server candidate identified.

Closing Assessment

Prospective users may proceed with ordinary account and service use, applying their organization's standard SaaS procurement, privacy, and vendor-onboarding controls before commercial deployment.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of vyaparapp.in.

- The request stayed on vyaparapp.in. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2028-12-16. CLEAR
- The earliest public archive of this site is from 2016-11-02. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about vyaparapp.in at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
