Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 2022.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is the official Greek public-service landing page for Gov.gr Wallet, presenting a mobile application through which individuals can access digital government documents, public services, messages, and related support functions as part of Greece's government digital infrastructure.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or malicious reputation findings were observed. The site's established history, sovereign government namespace, consistent institutional content, and clean interaction behaviour converge strongly against an impersonation scenario. No forms, concealed credential-capture mechanisms, suspicious scripts, external data submissions, wallet-draining behaviour, or cloaking were detected during the assessed interactions.

- The domain was registered in 2022 and is approximately 4 years old; its government namespace is the restricted `gov.gr` suffix.
- Web-archive records contain 740 snapshots spanning 2022–2026, representing 5 years of tracked history with no suspicious repurposing or semantic drift identified.
- The homepage identifies the service as Gov.gr Wallet, and the observed destination remained on the same domain without redirection to an unrelated site.
- External threat checks recorded 0 malicious and 0 suspicious detections, no safe-browsing alert, no external blacklist finding, and no reported abuse associated with the hosting address.

Regulatory Verification Notes

This is a sovereign public-service website rather than a commercial financial, brokerage, or investment platform. Its content describes an institutional framework, personal-data information, document revocation, application support, and the domestic legal equivalence of specified digital documents. The evidence does not establish a separate commercial licence or third-party regulatory registration, but such a claim is not presented as part of the site's government-service model. Transport encryption and nationally aligned research-and-government hosting further support the integrity of the service channel.

- The homepage provides dedicated routes for the institutional framework, personal-data processing, support, and revocation of digital documents.
- The supported digital identity cards and driving licences are described as legally equivalent to paper documents within Greece, while expressly not being international travel documents.

- The site is served from AS5408 by GR-NET – National Infrastructures for Research and Technology S.A., GR, in Greece.
- The site's TLS certificate was issued by YR2 with DV validation and is valid until 2026-09-03.

What to Verify Next

Routine user assurance should focus on accessing the application through the official download path presented by the government portal, confirming that the browser remains within the government namespace, and following the published support or revocation procedure if a device or digital document is compromised. Individuals relying on a digital document outside Greece should confirm acceptance with the relevant authority because the stated legal scope is domestic.

- The homepage directs users to an official application-download function and provides a dedicated internal support page.
- Access requires personal TaxisNet credentials together with a verified mobile number in the National Communication Registry, or personal web-banking credentials.
- The service supports verification and revocation of documents issued through Gov.gr Wallet and Gov.gr.
- The application includes access to the National Communication Registry for updating personal details and an emergency SMS function for contacting 112.

Summary Verdict

The website is a legitimate, established, and trustworthy Greek government service. Its institutional identity, sustained operational history, clean threat reputation, coherent public-service content, and benign observed behaviour provide strong, mutually reinforcing assurance. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The service resolves directly to a single likely origin address rather than operating behind a CDN or WAF. Direct origin visibility is not a risk finding in this context; the resolved infrastructure is consistent with the assessed sovereign service, and no associated abuse pattern was identified.

Closing Assessment

Prospective users may use the site and its standard authentication and document-service functions normally, while applying ordinary account-security practices and using the published government support procedures when assistance is required.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- Identity verified on page

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of wallet.gov.gr.

- The request stayed on wallet.gov.gr. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2022-07-27. CLEAR
- It is hosted on GR-NET, from a server in GR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about wallet.gov.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
