

Is walletconnect.com legit? TrustSniffer's high-trust assessment: 90/100

walletconnect.com

Verdict

90

OUT OF 100

HIGH TRUST

walletconnect.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 55%.

What this site appears to be

WalletConnect Pay markets an enterprise-grade, non-custodial infrastructure layer for accepting stablecoin and cryptocurrency payments across point-of-sale, e-commerce, wallet, and AI-agent use cases. The page cites security controls, SOC 2 compliance, sanctions screening, auditable records, global transaction scale, documentation, policies, and an Ingenico integration, while directing prospective business customers to contact sales or explore technical documentation.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

WalletConnect Pay is a business-to-business payment-infrastructure website presenting a non-custodial platform for accepting stablecoin and cryptocurrency payments through APIs and SDKs across point-of-sale, e-commerce, digital-wallet, and AI-agent environments.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or other scam-related conflicts were observed. The domain is long-established, has a strong global traffic footprint and high page authority, and received clean results across the supplied external threat-reputation checks. Interactive testing also found no credential-harvesting forms, wallet-drainer activity, clipboard hijacking, cloaking, suspicious scripts, or untrusted form destinations.

- Domain-registration records show that the homepage domain was registered in 2009 (~16.63 years old) through Cloudflare, Inc., with registration valid to 2026-12-19.
- External reputation evidence for the domain recorded 0 malicious and 0 suspicious detections, no malicious safe-browsing finding, no abuse reports, and a global traffic rank of 11,478.
- Behavioral examination of the homepage completed 2 of 2 runs without detecting hidden forms, password forms, wallet-sensitive actions, wallet-drainer behavior, clipboard modification, cloaking, or suspicious inline scripts.

Regulatory Verification Notes

The homepage describes security and compliance controls that include SOC 2 compliance, sanctions screening, auditable records, and non-custodial settlement. It also presents an Ingenico integration and states that the wider WalletConnect Network processes more than \$400 billion in annual transaction volume. These are substantive enterprise-facing representations, but the supplied page evidence does not identify a claimed financial-services licence, licence number, or supervising authority. This is a disclosure-verification matter rather than evidence of fraud, particularly because the service is presented as infrastructure for payment providers, merchants, and wallets rather than as a custodial investment product.

- The homepage markets stablecoin and cryptocurrency acceptance through a single alternative-payment-method-style integration for payment service providers, merchants, wallets, and enterprise partners.

- The homepage expressly presents SOC 2 compliance, sanctions screening, auditable transaction records, and non-custodial settlement as operational controls.
- The homepage provides documentation, policy, sales-contact, company, and careers pathways, but the reviewed material makes no licensing claim and names no licence authority or registration number.
- The site's transport encryption uses a WE1-issued domain-validated TLS certificate, valid to 2026-10-22.

What to Verify Next

Enterprise onboarding should include obtaining the current SOC 2 report and defining its scope, confirming the contracting legal entity and applicable regulatory allocation for the intended jurisdiction, and reviewing settlement, sanctions-screening, data-processing, incident-response, and service-level terms. The stated commercial integration should also be corroborated through independent documentation, while production implementation should follow the published technical materials and undergo normal payment-security and smart-contract due diligence.

- The homepage directs prospective customers to separate "Contact Sales" and "Explore the Docs" routes, providing channels for commercial and technical diligence.
- The homepage positions the service for integration into existing payment stacks, making contractual responsibility, API security, settlement design, and jurisdictional role allocation material onboarding questions.
- The homepage's cookie-preference interface permits acceptance, refusal, and later adjustment of non-essential cookies.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence across identity, reputation, authority, content quality, and observed behavior. No contradictory evidence undermines its stated business identity or indicates an abusive interaction model.

Infrastructure Integrity

The site is served from AS13335 (Cloudflare, Inc., US) and protected by Cloudflare CDN/WAF infrastructure. Six of seven observed addresses were classified as edge addresses, with one potential origin candidate; this edge architecture reduces direct service exposure but is a technical mitigation rather than independent proof of legitimacy.

- Hosting telemetry confirms service from AS13335 (CLOUDFLARENET — Cloudflare, Inc., US).
- Infrastructure resolution identified 7 unique IP addresses, comprising 6 CDN edge addresses and 1 likely origin candidate.
- Cloudflare was confirmed as the site's trusted CDN/WAF provider.

Closing Assessment

Normal interaction, including account login, standard platform use, and routine transactions, is appropriate, subject to the customary contractual, technical, and compliance diligence applied to enterprise payment integrations.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of walletconnect.com.

- The request stayed on walletconnect.com. It was not redirected to another domain. CLEAR
- Registration is published under Cloudflare, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-12-19. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about walletconnect.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
