Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a South African technology-services provider presenting web hosting, server, domain, storage, backup, and fibre-connectivity services through subscription-based and transactional offerings.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent technology-services business model, while external reputation checks found no malicious or suspicious classification, no phishing indicators, and no brand-impersonation evidence. The domain also demonstrates sustained historical continuity consistent with an established service operation.

- Domain registration: 2012-09-14 (~13.89 years old).
- Web archive: 173 snapshots spanning 2013-02-07–2026-05-15 (14 years tracked).
- External reputation checks recorded zero malicious and zero suspicious findings.

Regulatory Verification Notes

The site presents identifiable service categories, published offerings, contact details, and service-policy links. Its products include Linux hosting, VPS and dedicated servers, reseller and WordPress hosting, domain registration, hosted email and storage, colocation, online backup, and fibre packages. No licensing claim or registration number is identified in the supplied page evidence; this is a limited disclosure point for regulatory verification, not an indication of impersonation or fraud. The available third-party broker context contained no match.

- Registrar: Web Telecom Services (PTY) Ltd.
- Hosted on AS13335 (Cloudflare); hosting provider: CLOUDFLARENET - Cloudflare, Inc., US.
- TLS certificate issued by WE1 (DV), valid to 2026-10-28.
- Homepage title: "Web Hosting South Africa | Virtual Servers | Domain Names"; the page includes support and policy references.

What to Verify Next

For procurement or regulated use, confirm any applicable telecommunications, hosting, or domain-service obligations with the relevant South African registry or authority, and validate contractual terms and official support channels through independently sourced business records.

- The homepage identifies hosting, domain, server, backup, email, colocation, and fibre services.

- The supplied page analysis records no sensitive forms, hidden forms, or untrusted form destinations.
- The site provides a published support telephone channel and service-policy links.

Summary Verdict

The website presents as a legitimate, established, high-trust technology-services provider with no observed scam, phishing, impersonation, or malicious-reputation indicators. Normal interaction, including account login and standard service use, is appropriate.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a meaningful mitigating layer, and all observed addresses were CDN edge infrastructure rather than exposed origin candidates. This supports operational resilience and reduces direct origin exposure, although protective infrastructure alone is not proof of legitimacy.

Closing Assessment

Standard engagement is appropriate, subject to ordinary commercial checks proportionate to the value and regulatory sensitivity of the service.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about web-telecoms.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
