Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Web30s is an established Vietnamese website-building platform operated by P.A Việt Nam, presenting self-service site creation alongside design, maintenance, optimization, and related paid business-web services.

Scam/Impersonation Risk

No phishing, brand impersonation, conflicting legal identity, or other contradictory signal was observed. The homepage presents a coherent commercial offering built around the Web30s Editor, editable templates, e-commerce capabilities, SEO tools, payment and shipping integrations, premium templates, recurring applications, logo and landing-page design, and website support services. These products form a plausible SaaS business model, while observed browser activity showed no credential-harvesting forms, cloaking, wallet-draining behavior, clipboard interference, or untrusted form destinations.

- The homepage consistently identifies Web30s as a website-builder and design-services platform associated with P.A Việt Nam.
- Independent threat-reputation checks recorded 0 malicious and 0 suspicious detections, with no phishing or external threat-list hit.
- Two successful behavioral runs found no hidden forms, external password forms, suspicious inline scripts, cloaking, fingerprinting, or wallet-related activity.
- The domain holds traffic rank 298,291 and is within the global top one million, supporting an established public footprint.

Regulatory Verification Notes

The site provides substantive corporate and operational disclosures, including the operator's identity, physical office addresses, support channels, policies, and telecommunications-licence information. This is strong transparency for a website-design SaaS provider. The available evidence does not independently establish the legal status or current scope of the displayed corporate and telecommunications details, but this is a routine verification consideration rather than evidence of misrepresentation; no competing entity name or adverse broker association was found.

- The homepage publishes the P.A Việt Nam corporate identity together with office, contact, policy, and customer-support information.
- The site's service and pricing content describes package-based, add-on, and recurring-fee revenue mechanics rather than an unexplained financial proposition.
- Hosting resolves to AS45544 (SUPERDATA-AS-VN - SUPERDATA-VN, VN), registered through the APNIC region and located in Vietnam.

- The site uses a DV TLS certificate issued by YE1, valid until 2026-10-12.

What to Verify Next

For enterprise procurement or a material paid engagement, the contracting entity should be matched against the corporate details shown on the site, the displayed telecommunications authorisation should be checked with the relevant Vietnamese authority where its scope affects the proposed service, and commercial terms should be reviewed for renewal, support, data-handling, and termination provisions. Official contact channels may also be confirmed through an independent business directory or other offline corporate source.

- The site publishes service-pricing examples and paid add-ons that should be reconciled with the final order form or contract.
- Policy and help resources are presented for customer review before purchase.
- Physical offices and customer-service channels provide concrete reference points for independent corporate confirmation.

Summary Verdict

Web30s is a legitimate, established, and trustworthy commercial website with a coherent identity, credible operating model, clean external reputation, and no observed contradictions. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site is served directly from a single likely origin address operated by SUPERDATA-VN, without a detected CDN or WAF intermediary. Direct origin visibility is a conventional hosting configuration rather than a legitimacy concern, while valid TLS provides transport protection; infrastructure alone is not treated as proof of identity.

Closing Assessment

Prospective customers may proceed with ordinary use and apply standard contractual and supplier-due-diligence controls when commissioning paid services.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of web30s.vn.

- The request stayed on web30s.vn. It was not redirected to another domain. CLEAR
- It is hosted on SUPERDATA-AS-VN, from a server in VN. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about web30s.vn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
