Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Kenya Web Hosting Experts is a Kenyan technology-services website presenting web hosting, domain registration, VPS servers, SSL certificates, and web-design services through annual plans, service orders, customer support channels, and a client-area login.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent hosting-services business model, identifies Kenya Web Hosting Experts Ltd, provides local contact details and a Nairobi address, and links to established social platforms. The content and observed behavior show no phishing, brand-impersonation, wallet-drainer, or malicious-script indicators.

EVIDENCE

- Homepage: hosting, domains, VPS, SSL, and web-design services are described with annual pricing.
- Homepage: client login, live chat, ticket submission, telephone contact, and social links are presented.
- External reputation checks: zero malicious and zero suspicious detections, with no blacklist or phishing hit.
- Domain registration: Registered 2019-01-07 (~7.57 years old).

Regulatory Verification Notes

The site appears to operate as a commercial hosting and web-services provider rather than a regulated financial service. Its identity presentation is coherent, but no regulated license claim or license number is shown in the supplied content; this is a transparency item for confirmation, not evidence of fraud. The domain uses Web Hosting Experts Ltd as registrar, and its transport encryption is valid.

EVIDENCE

- Registrar record: Web Hosting Experts Ltd; registration date 2019-01-07 and expiry date 2027-01-07.
- TLS certificate: issued by YR1, DV validation, valid to 2026-09-05.
- Homepage: identifies Kenya Web Hosting Experts Ltd and provides a Nairobi business address.
- Third-party broker context: no matching entity was found.

What to Verify Next

For any procurement or material payment, confirm the company's current business registration and applicable service obligations through the relevant Kenyan registry, and independently confirm the published support and billing channels before entering a commercial agreement.

EVIDENCE

- Homepage: publishes the company name, telephone number, email channel, and Nairobi address.
- Service pages: describe tiered annual hosting, domain, VPS, SSL, and web-design offerings.
- Terms, billing, and service-level provisions should be reviewed before purchase.

Summary Verdict

The website presents as a legitimate, established, and trustworthy commercial technology provider with a low-risk content profile and no observed contradiction signals. Normal interaction, including account login and standard service use, is appropriate.

Infrastructure Integrity

The site is protected by a CDN/WAF layer, with observed edge hosting on AS16276 operated by OVH - OVH SAS, France; the origin server was not observable. This protective architecture mitigates direct origin exposure but is treated as supporting infrastructure rather than proof of legitimacy.

Closing Assessment

Standard engagement is appropriate, with ordinary procurement and account-security controls applied to any paid service relationship.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	78%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about webhostexperts.co.ke at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
