

weroll-byte-welcome-bob-the-builder.pages.dev: TrustSniffer

assessment: 15/100

weroll-byte-welcome-bob-the-builder.pages.dev

Verdict

15

OUT OF 100

CRITICAL RISK

weroll-byte-welcome-bob-the-builder.pages.dev shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-19 by automated analysis. Classification confidence 55%.

WHAT THIS SITE APPEARS TO BE

Short landing/login-style page for 'ShareFile Pro' claiming secure, end-to-end encrypted file sharing with zero-knowledge. Lacks forms, pricing, contact, or verifiable trust/legal information.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://weroll-byte-welcome-bob-the-builder.pages.dev/>

What weroll-byte-welcome-bob-the-builder.pages.dev served when TrustSniffer captured it on 2026-09-19. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website presents itself as “ShareFile Pro,” a minimal file-sharing landing or login surface claiming simplified, end-to-end encrypted, zero-knowledge file sharing. Its apparent purpose is to attract users to a secure file-transfer service, but the available page provides insufficient detail to establish the operator, service mechanics, or commercial model.

Scam/Impersonation Risk

The site presents a material sensitive-interaction risk. External reputation checks recorded five malicious detections, one suspicious detection, and a confirmed blacklist result from multiple sources. These findings converge with the homepage's unusually thin content: it makes high-stakes security claims—“End-to-end encrypted” and “Zero knowledge”—without explaining the product, encryption implementation, service ownership, or operational safeguards. The page is login-oriented in presentation but provides no established service context, creating a significant risk that credentials or confidential files could be submitted to an unverified

destination. No distinct legal-entity identity contradiction or confirmed brand impersonation was observed in the supplied page evidence.

EVIDENCE

- The homepage is titled “ShareFile Pro” and displays the claims “Secure file sharing, simplified” and “End-to-end encrypted · Zero knowledge.”
- External reputation results recorded 5 malicious detections and 1 suspicious detection, with a confirmed blacklist result.
- The homepage contains no clear product detail, pricing, contact information, or verifiable trust information despite presenting a security-sensitive service.

Regulatory Verification Notes

The site’s regulatory and identity position cannot be established from the available content. No operator name, legal entity, licensing statement, registration number, governing jurisdiction, terms, privacy disclosure, or other verifiable corporate information is presented on the available page. This is a significant transparency gap for a service inviting the handling of potentially confidential files, although the absence of a disclosed license is a verification issue rather than independent proof of criminal conduct. Independent identity verification is also unresolved, and the site’s low external authority provides no meaningful support for its security claims. No broker-dataset match was identified.

EVIDENCE

- The homepage provides no operator, corporate, licensing, jurisdiction, terms, or privacy disclosure.
- No pricing, service limitations, or transactional model is visible on the homepage.
- The available authority signal is low and does not independently validate the business or its security claims.

What to Verify Next

Before any sensitive interaction, an organization should identify the service operator through an independently obtained corporate name and verify that entity through the relevant official registry. Any claimed encryption, zero-knowledge architecture, data-retention policy, and incident-contact process should be documented and technically corroborated through independent sources. Official support and contact channels should be confirmed through an offline or independently sourced route, and organizational policy should prohibit credential, confidential-file, or payment submission until those checks are complete.

EVIDENCE

- The homepage presents security claims without technical documentation or supporting governance material.
- The available page does not establish an accountable operator or formal service terms.
- No independent contact, support, or escalation route is documented on the available page.

Summary Verdict

The website has a critical trust posture and should be treated as an unverified, high-risk destination for sensitive interaction. The combination of confirmed external threat detections, a blacklist result, thin claim-supported content, and unresolved operator identity does not support normal account, credential, confidential-file, or financial use.

Infrastructure Integrity

The site is served through Cloudflare CDN/WAF infrastructure, which can mitigate direct exposure of hosting systems but is only a protective delivery layer and does not establish legitimacy. The observed infrastructure includes CDN edge servers and a potential origin candidate; this architecture neither validates the operator nor offsets the adverse reputation findings.

EVIDENCE

- Served from AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Observed Cloudflare edge IPs include 104.18.20.135, 104.18.21.135, 104.21.11.97, and 104.21.37.214.
- The transport certificate is issued by YE2, uses Domain Validation (DV), and is valid to 2026-11-14T08:21:38+00:00.

Closing Assessment

Sensitive use should be withheld unless independent operator, service-security, and contact-channel checks produce satisfactory evidence; any required assessment should remain limited to non-sensitive observation.

Written analysis generated 2026-09-19 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by page content, registration and ownership, analysis engine.

01 Governance Risk

- The page presents a sign-in form, and the operator behind it could not be independently verified.

Page content rule:PAGE_TYPE_LOGIN_UNVERIFIED
- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of weroll-byte-welcome-bob-the-builder.pages.dev.

- The request stayed on weroll-byte-welcome-bob-the-builder.pages.dev. It was not redirected to another domain. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about weroll-byte-welcome-bob-the-builder.pages.dev at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
