Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Wikideals is a South African e-commerce marketplace presenting time-limited discounted vouchers for dining, accommodation, spa and beauty treatments, activities, and local services, with customer accounts, coupon and order management, and a merchant-onboarding programme that appears designed to generate transaction commissions or listing fees.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or other scam-related conflicts were observed. The site presents conventional marketplace functions, including account registration, sign-in, password recovery, and voucher purchasing; these forms remained within trusted destinations, with no hidden credential collection, cloaking, clipboard interference, or cryptocurrency-wallet behaviour detected. Its long operating history, substantial archival continuity, established traffic footprint, and clean external reputation strongly support the conclusion that it is the legitimate Wikideals marketplace rather than a recently created imitation.

- The domain registration record shows registration on 7 June 2011 through Afrihost, making it approximately 15.17 years old; registration currently expires on 7 June 2027.
- The web archive contains 165 snapshots from 7 July 2011 through 28 January 2026, spanning 16 tracked years, with no suspicious repurposing or semantic drift identified.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no search-browser security warning, no reported abuse, and inclusion within the global top one million at rank 194,713.
- Behavioural examination of the homepage found no hidden forms, external password submission, suspicious inline scripts, cloaking, wallet-drainer activity, or brand impersonation.

Regulatory Verification Notes

Wikideals presents as a retail voucher marketplace rather than a financial, investment, brokerage, or cryptocurrency service, and it makes no regulated-financial-service or licensing claim. The homepage provides links to About, Contact, FAQ, and policy material, although the extracted homepage text does not itself state a legal-entity name or corporate registration identifier. This is a minor corporate-disclosure consideration for institutional onboarding, not evidence of deception or a regulatory breach. No corresponding broker profile was identified in the supplied third-party broker context, which is consistent with the apparent non-brokerage business model and carries no adverse implication.

- The homepage identifies the service as a Magento-based e-commerce marketplace and provides links to About Us, Contact Us, FAQs, and platform policies.
- The homepage includes a “Sell on Wikideals” route for merchant acquisition but makes no claim to provide regulated financial products.
- The site is served from AS13335 (CLOUDFLARENET – Cloudflare, Inc., US).
- The site’s transport encryption uses a valid DV TLS certificate issued by YE1, valid until 1 November 2026.

What to Verify Next

For enterprise procurement or material-volume purchasing, onboarding should confirm the contracting entity, applicable terms, refund and voucher-expiry rules, and merchant settlement responsibilities from the linked legal materials. Individual offers should be checked for merchant identity, inclusions, booking restrictions, and redemption deadlines before purchase. Official customer-service channels may also be independently confirmed when handling disputes or unusually valuable transactions.

- The homepage publishes customer-care availability from Monday to Friday, 10:00 to 16:00, together with a South African telephone number.
- A featured accommodation offer advertises a one-night stay for two people at R799 and displays a live sale countdown.
- A featured massage offer displays a special price of R199 against a regular price of R680, illustrating the need to review offer-specific conditions.
- The homepage provides My Coupons, My Orders, and My Account functions relevant to purchase and redemption administration.

Summary Verdict

The website is a legitimate, established, and trustworthy online marketplace. Its identity, operating continuity, reputation, page content, and observed behaviour converge without material contradiction, supporting a high-confidence assessment of authenticity and low scam or impersonation risk.

Infrastructure Integrity

The website is protected by a mainstream Cloudflare CDN and WAF. All six observed addresses were edge servers, with no direct origin-server candidate exposed; this reduces direct infrastructure exposure and provides a meaningful security mitigation, although protective infrastructure is not independently proof of business legitimacy.

Closing Assessment

Normal browsing, account login, account management, and standard marketplace transactions are appropriate, subject to ordinary review of the terms attached to each purchase.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
--------	------------

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of wikideals.co.za.

- The request stayed on wikideals.co.za. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Afrihost. [CLEAR](#)
- DNS for this domain is served by cloudflare.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-06-07. [NOTED](#)
- The earliest public archive of this site is from 2011-07-07. [CLEAR](#)
- It is hosted on CLOUDFLARENET, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about wikideals.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
