Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

WirtualneMedia.pl is a Polish news and media website presenting editorial coverage of media, advertising, internet, public relations, television, and radio. Its apparent business model is an established, ad-supported publishing operation supplemented by paid subscriptions and job-listing services, with consent-based advertising personalisation and analytics.

Scam/Impersonation Risk

No contradictions were observed: there are no reported phishing, impersonation, blacklist, or malicious-reputation indicators, and the site's editorial presentation is coherent with its stated media purpose. The homepage does not present a login or sensitive-data form, while the observed consent, advertising, and analytics activity is consistent with a conventional publishing website rather than an abuse-oriented interaction model. Operator identity is not independently verified, so the positive assessment supports apparent legitimacy rather than proving the real-world entity behind the site.

EVIDENCE

- The homepage is classified as a news/media and informational page, with no detected red flags or brand-impersonation indicators.
- External reputation checks recorded zero malicious and zero suspicious detections, with no blacklist or phishing result.
- The domain was registered on 2001-12-07 and is approximately 24.69 years old; the registrar is OVH SAS.

Regulatory Verification Notes

The available evidence is consistent with an editorial publisher rather than a site offering a regulated financial service. No financial license or license number is claimed in the supplied site content; for this business model, that is a disclosure point to clarify only if a paid subscription, job-listing service, or other commercial transaction is being considered. The homepage's consent notice identifies Wirtualna Polska as the publisher and describes data processing and sharing with advertising partners, but that on-site statement should not be treated as independent proof of the operator's legal identity. The site uses valid domain-validated transport encryption, providing a sound technical baseline without constituting regulatory validation.

EVIDENCE

- The homepage consent notice identifies Wirtualna Polska as the publisher and provides advanced consent settings for advertising and analytics processing.
- The site's TLS certificate is issued by RapidSSL TLS RSA CA G1, uses DV validation, and is valid to 2026-08-17T23:59:59+00:00.
- The site presents an informational publishing model with advertising, subscription, and job-listing monetization rather than a stated regulated financial activity.

What to Verify Next

Before credential or payment interactions, independently confirm the legal identity of the publisher, review the applicable subscription or job-listing terms, and verify refund, cancellation, and payment-protection arrangements. Privacy-sensitive users should also review the consent settings and the categories of advertising partners before accepting personalised tracking. Official support and contact channels should be confirmed through an independent route if a commercial issue arises.

EVIDENCE

- The homepage provides an advanced-settings path within its cookie-consent mechanism.
- The site's stated commercial functions include paid subscriptions and job-listing services.
- The supplied page analysis found no sensitive form, external password form, wallet connection, or clipboard-interception behavior.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for its publishing function. The conclusion is grounded in convergent content, reputation, registration continuity, and technical signals, while the real-world operator identity remains unverified.

Infrastructure Integrity

The site resolves to a directly observed single-address hosting posture rather than a detected CDN edge, with no confirmed WAF or CDN deployment in the supplied infrastructure evidence. Hosting through an identified commercial Polish media network is a mitigating operational signal, but infrastructure alone is not proof of legitimacy.

EVIDENCE

- Hosted on AS31080, O2-AS - Wirtualna Polska Media S.A., PL.
- Resolved IP address: 193.222.135.78, Poland; unique IP count: 1.
- CDN detected: false; edge IP count: 0; likely origin IP count: 1.

Closing Assessment

Ordinary informational browsing is proportionate to the assessed posture; independent publisher-identity, commercial-terms, and payment-protection checks should precede credential submission or paid transactions.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of virtualnemedi.pl.

- The request stayed on virtualnemedi.pl. It was not redirected to another domain. CLEAR
- Registration is published under OVH SAS. CLEAR
- DNS for this domain is served by wp.pl, across 2 name servers. NOTED
- The registration is paid up to 2026-12-06. NOTED
- It is hosted on O2-AS, from a server in PL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about wirtualnedia.pl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
