Key findings

- Automated classification: Safe for Read-Only.
- Public web-archive history exists since 2003.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

WoodLand is a Greek local-retail website presenting flooring, doors, windows and frames, stairs, kitchens, wardrobes, product specifications, and installation-related services, with an apparent business model based on product sales and residential or commercial fitting work.

Scam/Impersonation Risk

No contradictions were observed: the available evidence identifies no phishing, impersonation, or malicious-content indicators, and the site's presentation is consistent with a conventional local retail and installation business. The homepage includes product catalogues, technical information, contact numbers, and a showroom address rather than login or sensitive-data collection functionality. The domain's recorded historical continuity also does not indicate suspicious repurposing. Identity remains independently unverified, so the apparent business legitimacy should not be treated as proof of the real-world operator's identity.

EVIDENCE

- The homepage presents WoodLand as a flooring, doors, windows, stairs, kitchens, and wardrobes retailer with installation-related services and no detected brand-impersonation indicators.
- The homepage contains no login form, hidden form, password-external form, or other sensitive form.
- Historical continuity is recorded from 2003-06-21 through 2026-01-23, covering 24 years.
- External security checks recorded no malicious or suspicious detections, and the broker-intelligence dataset returned no match.

Regulatory Verification Notes

The site provides commercial content, product information, contact details, a showroom location, and cookie/privacy information, which supports an identifiable retail operating context. However, the supplied evidence does not establish the legal entity independently, and no license or registration number is presented for verification. That is a transparency and regulatory-verification gap rather than evidence of a scam; the business model itself is ordinary retail and installation rather than a regulated financial service. The site's transport security is technically valid, but domain validation confirms control of the domain and does not independently validate the operator.

EVIDENCE

- The homepage publishes contact numbers, a showroom address, product specifications, and cookie/privacy information.
- The website's TLS certificate is issued by YR2, uses DV validation, and is valid to 2026-10-24T19:44:34+00:00.
- No license claim, licensing authority, or registration number is presented in the supplied business-model evidence.

What to Verify Next

Before a high-value order, the prospective counterparty should confirm the business's legal name, invoicing entity, and any applicable commercial registration through an official Greek registry or an independently obtained business record. Payment arrangements should use a method providing documented buyer protection, and the showroom and published contact channels should be confirmed through an independent route before funds or sensitive information are exchanged.

EVIDENCE

- The homepage supplies a showroom location that can be independently cross-checked.
- The site includes product and technical information but does not provide a license or registration number in the supplied evidence.
- The site has no sensitive form or login workflow identified during technical interaction analysis.

Summary Verdict

The website has a **moderate-trust posture** supported by coherent commercial content, stable operation, valid transport encryption, and the absence of observed contradiction or active threat indicators. Its apparent

legitimacy is evidence-consistent, but operator identity and business disclosures are not independently verified; normal browsing is reasonable, while sensitive or high-value engagement warrants the checks described above.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, with observed edge infrastructure hosted by HETZNER-AS—Hetzner Online GmbH in Germany on AS24940; the origin server was not observable in this analysis. This provides a mitigating layer against direct exposure and some abuse patterns, but protective infrastructure alone is not proof of business legitimacy.

EVIDENCE

- Served from AS24940 (HETZNER-AS—Hetzner Online GmbH, DE), with observed edge IP 168.119.147.28.
- CDN/WAF protection was detected; one edge IP was observed and no likely origin candidate was identified.
- Transport encryption uses a valid DV certificate issued by YR2, expiring 2026-10-24T19:44:34+00:00.

Closing Assessment

The appropriate posture is ordinary browsing with independent counterparty and payment checks completed before sensitive information is submitted or a high-value transaction is made.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by behaviour in a sandbox.

01 Dynamic Interaction Caution

- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- The page sent data to a destination TrustSniffer does not recognise.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of woodland.net.gr.

- The request stayed on woodland.net.gr. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2003-06-21. CLEAR
- It is hosted on HETZNER-AS, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about woodland.net.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
