

Is workerstats.net safe? TrustSniffer's low-trust assessment: 25/100

workerstats.net

Verdict

25

OUT OF 100

LOW TRUST

workerstats.net is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-19 by automated analysis. Classification confidence 55%.

What this site appears to be

A minimal, access-restricted page labeled 'SPC Data Services' stating the endpoint is reserved for authorised systems. No login form, contact details, or explanatory content present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

SPC Data Services

What workerstats.net served when TrustSniffer captured it on 2026-09-19. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

workerstats.net presents a minimal “SPC Data Services” endpoint stating that access is reserved for authorised systems. It appears to function as a private service portal rather than a public commercial website, but it provides no explanatory business context, product information, or visible contact channel.

Scam/Impersonation Risk

The site presents a **high-risk sensitive-interaction posture**. A confirmed external blacklist record and additional external security detections materially outweigh the limited benign technical observations. The homepage is an access-restricted endpoint with no public context, no visible login form, and no explanation of the systems or organisation to which access is supposedly authorised. No conflicting legal identities or explicit brand-impersonation indicators were observed, but the available evidence does not establish that the endpoint is operated by a legitimate organisation. Sensitive interaction should therefore be treated as unsafe pending independent confirmation.

EVIDENCE

- The homepage is labelled “SPC Data Services” and states that the endpoint is reserved for authorised systems, while providing no public explanation or service context.
- External reputation checks record a confirmed blacklist hit and three suspicious detections; one evaluated security provider also flagged the domain.
- The domain was registered on 2026-01-28 and is approximately 0.64 years old.

Regulatory Verification Notes

The site does not present a legal entity, licensing statement, registration number, regulatory authority, terms page, or contact details. This is a material disclosure gap for an endpoint requesting or implying restricted access, although the page does not describe a financial product or regulated service. The real-world operator remains unverified, and the available evidence is insufficient to connect the “SPC Data Services” label to a legally identifiable organisation. A valid transport certificate confirms encrypted delivery, not licensing, authorisation, or legitimacy.

EVIDENCE

- The observed homepage contains only the “SPC Data Services” label, an access restriction notice, and a copyright line; no legal or regulatory disclosure is present.
- The site is hosted on AS59692 (IQWEB - IQWeb FZ-LLC, AE).
- The TLS certificate is issued by YR2, uses DV validation, and is valid to 2026-12-13.

What to Verify Next

Before any access is attempted, the purported service owner should be identified through an independent corporate or institutional source, and the authorised-system relationship should be confirmed through an independently obtained contact channel rather than through the website. If the endpoint is claimed to support a regulated activity, the relevant licensing or registration should be checked directly with the applicable official registry. The domain should not be used for credential submission or financial activity until those checks produce a consistent, independently corroborated result.

EVIDENCE

- The homepage provides no independent contact route through which its authorised-system claim can be validated.
- The public-facing content does not identify the organisation responsible for the endpoint or describe the systems to which access is restricted.

Summary Verdict

This is a low-trust website with elevated risk for sensitive interaction. The combination of confirmed adverse external reputation, minimal access-restricted content, and an unverified operator identity supports a clearly cautionary assessment rather than ordinary-use trust.

Infrastructure Integrity

The site resolves directly to a single likely origin rather than through a detected CDN or WAF edge. This reduces the mitigating value normally provided by intermediary protective infrastructure; infrastructure stability and encrypted transport do not establish operator legitimacy.

EVIDENCE

- Hosting infrastructure is served from AS59692, IQWEB - IQWeb FZ-LLC, AE.
- Infrastructure analysis identified one unique IP, no CDN edge IPs, and one likely origin IP.

Closing Assessment

The appropriate posture is to suspend login, credential, and financial interaction until the operator, authorised-service relationship, and any applicable regulatory standing have been independently confirmed.

Written analysis generated 2026-09-19 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by registration and ownership, page content.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE
- The page presents a sign-in form, and the operator behind it could not be independently verified.
Page content rule:PAGE_TYPE_LOGIN_UNVERIFIED

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of workerstats.net.

- The request stayed on workerstats.net. It was not redirected to another domain. CLEAR
- Registration is published under NICENIC INTERNATIONAL GROUP CO., LIMITED. CLEAR
- DNS for this domain is served by ddos-guard.net, across 2 name servers. NOTED
- The registration is paid up to 2028-01-28. CLEAR
- It is hosted on IQWEB, from a server in AE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about workerstats.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
