

Is xdomain.ne.jp legit? TrustSniffer's high-trust assessment: 80/100

xdomain.ne.jp

Verdict

80

OUT OF 100

HIGH TRUST

xdomain.ne.jp appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Official-looking Japanese page for XServer's domain registration service (XServer ドメイン). Contains pricing, campaign notices, product descriptions, support links, and corporate security certifications. No obvious phishing or crypto-investment signals.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This Japanese-language website is a corporate domain-registration and hosting-services portal presenting XServer Domain to visitors through pricing, promotional campaigns, domain transfers, auctions and backorders, support resources, and related services such as VPS, SSL, business hosting, and online-shop solutions. Its apparent business model is fee-based domain registration and renewal supplemented by hosting subscriptions and technical add-ons.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent corporate service model, and page-level analysis found no phishing, brand-impersonation, cryptocurrency-investment, wallet-drainer, hidden-form, or suspicious payment-destination indicators. Interaction telemetry did record substantial dynamic page changes and console errors, but the observed behavior did not include cloaking, external password submission, wallet activity, or other evidence connecting those implementation characteristics to impersonation. The overall evidence is therefore consistent with an established, apparently legitimate service website, while the real-world operator identity remains independently unverified.

EVIDENCE

- The domain registration record identifies creation on 2013-07-26 and an age of 13.05 years.
- Web-archive coverage records 648 snapshots from 2013 through 2026, spanning 14 tracked years.
- Browser interaction testing recorded 5,805 DOM mutations, a maximum post-interaction DOM difference of 5,805, and 14 console errors; it recorded no hidden forms, external password forms, wallet connections, wallet-drainer activity, or cloaking.

Regulatory Verification Notes

The site provides company-overview, terms, privacy, support, disclosure-request, and related legal-information pages, which is a substantive transparency positive for a commercial service portal. No financial, broker, or other regulated-service license claim or registration number is presented in the supplied page evidence; this is a verification gap rather than evidence of a scam. Available external reputation checks returned no malicious or suspicious classification, no confirmed blacklist finding, and no broker-dataset match. The page is professionally structured and content-rich, with an established service presentation, but the available evidence does not independently verify the legal entity operating the domain.

EVIDENCE

- The homepage links to “Company Overview,” terms of use, privacy policy, information-disclosure requests, support, payments, and contact resources.
- The site is served from AS131965, identified as XSERVER - Xserver Inc., JP.
- The transport certificate is issued by CloudSecure RSA Domain Validation Secure Server CA 3 at DV validation level and is valid through 2027-02-28.

What to Verify Next

Before credential or payment interactions, an organization should independently match the operator named in the company-information materials with the relevant corporate or domain-service registry, and confirm any licensing or registration requirements applicable to the intended use. Account holders should also review renewal, transfer, auction, cancellation, and refund terms and confirm official support and payment channels through an independent route rather than relying solely on links reached from an unsolicited message.

EVIDENCE

- The site exposes separate support resources, including frequently asked questions, manuals, community materials, payment information, and contact options.
- The visitor-facing navigation provides distinct login, application, new-domain-registration, transfer, auction, and backorder paths.

Summary Verdict

Available evidence supports an established, apparently legitimate website with a high-trust and low-risk posture. Its legitimacy is evidence-consistent rather than proven because independent operator identity verification is incomplete.

Infrastructure Integrity

The technical evidence identifies XSERVER - Xserver Inc., JP as the hosting provider and the site’s infrastructure is associated with a valid domain-validated TLS certificate. The supplied infrastructure facts do not establish a trusted CDN or WAF layer, so protective edge infrastructure should not be treated as an independent legitimacy proof; this does not alter the otherwise positive assessment.

Closing Assessment

Ordinary use is proportionate to the available risk posture, with independent merchant-identity, transaction-term, and payment-protection checks completed before credentials or funds are committed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status

UNVERIFIED

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of xdomain.ne.jp.

- The request stayed on xdomain.ne.jp. It was not redirected to another domain. [CLEAR](#)
- DNS for this domain is served by ne.jp, across 3 name servers. [NOTED](#)
- The earliest public archive of this site is from 2013-08-21. [CLEAR](#)
- It is hosted on XSERVER, from a server in JP. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about xdomain.ne.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
