Key findings

- Automated classification: Sensitive Interaction Risk.
- Public web-archive history exists since 2023.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Сеть РЦИС.РФ presents itself as a Russian public-sector and corporate blockchain infrastructure for recording, managing, and protecting intellectual-property rights. Its apparent business model is organizational participation and services supporting intellectual-property transactions, rather than consumer deposits or investment returns.

No confirmed phishing, impersonation, or identity contradiction was observed. The homepage provides a coherent institutional purpose, describes distributed intellectual-property registration, and offers a conventional organizational contact route. One isolated soft third-party reputation warning warrants contextual awareness, but it is not corroborated by the page content, which contains no identified fraud indicators.

The site's public-facing material describes a substantial institutional and technical service, but the supplied content does not establish a regulator, licence number, or independently verified legal-entity registration. This is a transparency matter for formal onboarding, not evidence of fraud. The site's claimed public-sector and corporate role should therefore be distinguished from any separately required regulatory authorization.

Before high-value engagement, the prospective counterparty should confirm the operator's legal identity and any applicable authorization through the relevant official registry, and independently validate the organization's contact and participation channels using trusted offline or pre-existing institutional records.

The website has a coherent institutional purpose and a moderate, not conclusive, trust posture. Its substantive content and technical continuity support treating it as an established operating service, while the available evidence does not justify treating it as fully verified for regulated or high-value reliance.

The site is protected by Cloudflare CDN/WAF infrastructure, and the observed address is an edge address rather than an exposed origin. This reduces direct origin exposure and provides a mitigating security control, but it does not independently establish organizational legitimacy.

Standard browsing and ordinary organizational inquiry are reasonable, while licensing, operator identity, and transaction arrangements should be independently confirmed before sensitive or high-value commitments.

- Homepage: describes intellectual-property rights infrastructure, distributed records, network participants, and six transaction types.
- Homepage: presents a corporate/public-sector landing page with no login form, hidden form, wallet-drainer behavior, or deceptive conversion indicator.
- Archive record: 57 snapshots spanning 2023–2026, covering 4 tracked years.

- Homepage: identifies the service as a public-sector and corporate blockchain infrastructure for intellectual-property rights.
- Homepage: includes links described as legal and policy material and provides organizational participation information.
- Domain record: registered in 2023 and approximately 2.85 years old.
- Hosting record: served from AS8985, MSK-IX_Services - Join-stock company _Internet Exchange_MSK-IX_, Russia.
- Transport security: TLS certificate issued by YR1 using domain validation, valid through 2026-09-06.
- Legal and policy pages: review the named operator, governing terms, dispute provisions, and any stated authorization.
- Participation page: confirm onboarding requirements, responsible organizational contacts, and service obligations.
- Contact page or form: validate the destination and responsible department through an independent channel.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of xn--e1axe4b.xn--h1apes.xn--p1ai.

- The request stayed on xn--e1axe4b.xn--h1apes.xn--p1ai. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2023-09-26. CLEAR
- It is hosted on MSK-IX_Services, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about xn--e1axe4b.xn--h1apes.xn--p1ai at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
