

Is yourhosting.nl legit? TrustSniffer's high-trust assessment: 80/100

yourhosting.nl

Verdict

80

OUT OF 100

HIGH TRUST

yourhosting.nl appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Commercial Dutch hosting provider site offering domain registration, web hosting, VPS, managed services, email, security products and support. Clear marketing, support links, and customer trust signals; appears legitimate and low risk.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Yourhosting is a commercial Dutch web-services provider presenting domain registration, web hosting, VPS and managed VPS services, email, Microsoft 365, SSL and security products, website-building services, and customer support subscriptions. Its apparent business model is subscription and product-based sales to individuals and organizations requiring internet infrastructure and related support.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other contradictory identity signals were observed. The homepage presents a coherent hosting-provider proposition, links to established social platforms, and describes conventional services rather than investment, cryptocurrency, or unusually high-return offerings. External reputation checks were clean, and the site's long, continuous historical presence and established traffic footprint materially support an apparently legitimate operating history. Dynamic behavior included external requests and substantial DOM changes after interaction, but the observed sessions showed no cloaking, hidden forms, credential-capture form, wallet activity, clipboard manipulation, or other high-risk abuse pattern. The available evidence therefore supports a low scam or impersonation concern, while not independently proving the real-world operator's identity.

EVIDENCE

- Domain registration: registered 2001-09-26 (~24.89 years old).
- Web archive: 2,272 snapshots spanning 2001–2026 (26 years tracked), with a maximum observed gap of 1 year.
- Homepage: presents domain, hosting, VPS, email, SSL, security, support, and website services, with links to Facebook, LinkedIn, Instagram, and YouTube.
- Reputation telemetry: evaluated malware and phishing checks returned 0 malicious and 0 suspicious results, with no blacklist or phishing hit recorded.

Regulatory Verification Notes

The website's commercial content clearly describes a conventional hosting and managed-services business, including domain registration, web hosting, managed VPS, email, Microsoft 365, SSL, backup, security, and support subscriptions. No financial-services, crypto, or other regulated-investment proposition is presented. A licensing claim or registration number was not identified in the reviewed content; for this type of technology provider, that is a disclosure and verification point rather than evidence of fraud. The available material is

consistent with an established site, but the operator's legal identity remains likely rather than independently verified. The registrar and transport-security signals provide useful infrastructure context without constituting legal registration or regulatory authorization.

EVIDENCE

- Domain registrar: Realtime Register; creation date 2001-09-26T00:00:00Z.
- Hosting telemetry: served from AS20847, PROVIDER-AS - Previder B.V., NL.
- TLS telemetry: certificate issued by PerfectSSL, validation level DV, valid to 2026-11-04T23:59:59+00:00.
- Homepage: identifies a broad commercial service catalogue and provides customer-service, support, knowledge-base, shop, and account-access pathways.

What to Verify Next

Before credential or payment interactions, an enterprise or consumer counterparty should independently confirm the operator's legal name and applicable business registration through the relevant Dutch registry, and check that the terms, cancellation or return provisions, service-level commitments, and billing entity are consistent across the site and order process. Contact details should be validated through an independently sourced route, and payment should use a method offering appropriate dispute or buyer protection. Account access should be initiated from the verified official domain rather than from unsolicited messages.

EVIDENCE

- Homepage: includes customer-service, support, knowledge-base, shop, and account-access links.
- Homepage interaction surface: contains domain-search and checkout/cart functions but no detected sensitive login form or untrusted form destination.
- Product navigation: separates domain, hosting, website, email, Office, security, and service offerings, enabling the commercial terms for each service category to be checked independently.

Summary Verdict

The overall posture is **high trust and low risk**, with the evidence consistent with an established, apparently legitimate website. No scam, phishing, impersonation, or identity-conflict indicators were observed, although the real-world operator identity is not independently verified.

Infrastructure Integrity

The site resolves to infrastructure operated by PROVIDER-AS - Previder B.V. in the Netherlands, specifically AS20847, with two likely origin addresses and no detected CDN or WAF layer. This is a direct hosting arrangement rather than an edge-protected deployment; it does not by itself validate legitimacy, but the identified provider and resolved infrastructure offer a clear technical hosting context.

Closing Assessment

Standard interaction is proportionate to the assessed posture, provided ordinary independent checks of merchant identity, contractual terms, and payment protection are completed before credentials or payments are submitted.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of yourhosting.nl.

- The request stayed on yourhosting.nl. It was not redirected to another domain. CLEAR
- Registration is published under Realtime Register. CLEAR
- DNS for this domain is served by creation, across 5 name servers. NOTED
- The earliest public archive of this site is from 2001-11-13. CLEAR
- It is hosted on PROVIDER-AS, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about yourhosting.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
