

Is zaluposs.com safe? TrustSniffer's moderate-trust assessment: 5/100

zaluposs.com

Verdict

5

OUT OF 100

CRITICAL RISK

zaluposs.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-10-01 by automated analysis. Classification confidence 75%.

What this site appears to be

Corporate product and marketing page describing Cloudflare's network, security, edge compute, pricing tiers, and developer features. Encourages signups and provides pricing and documentation links.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	20 flagged it VirusTotal	RISK
Google Safe Browsing	Not listed Google	CLEAR

Domain age	15 days old Most scam domains are under a year old	RISK
Web archive	Archived since 2026 3 snapshots	CLEAR
Certificate	Encrypted connection Issued by YE1	NOTED

The page as captured

https://www.cloudflare.com/

What zaluposs.com served when TrustSniffer captured it on 2026-10-01. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- Public web-archive history exists since 2026.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website at zaluposs.com presents itself as a Cloudflare corporate product and marketing site, offering cloud networking, content delivery, security, edge-compute, and developer services through subscription, enterprise, and usage-based plans. Its homepage uses Cloudflare branding, promotes account creation and login, and describes a large-scale infrastructure and security platform.

Scam/Impersonation Risk

The site presents a material impersonation and sensitive-interaction risk. Its content adopts Cloudflare's corporate identity while operating on a different domain, and external threat-intelligence results identify the domain as malicious or suspicious, including detections from Fortinet, Kaspersky, and Sophos. The domain is also subject to a confirmed blacklist determination from multiple external sources. These findings outweigh the otherwise professional presentation, which includes no visible login form, hidden form, wallet connection, or obvious malicious page feature. The appropriate security posture is to treat the site as potentially deceptive and unsuitable for credentials, account access, downloads, or financial interaction.

EVIDENCE

- The homepage uses the title “Cloudflare: Build for the agent era,” presents Cloudflare products and customer claims, and links to login, dashboard, pricing, documentation, and signup functions.
- External scanning recorded 20 malicious detections and 1 suspicious detection; Fortinet, Kaspersky, and Sophos were among the flagged vendors.
- The domain was registered on 2026-09-16 and is approximately 0.04 years old; the registrar is Dominet (HK) Limited.
- Web-archive coverage records 3 snapshots spanning 2026–2026, with 1 year tracked.

Regulatory Verification Notes

The available evidence does not independently verify the real-world operator behind the domain, and the site’s legal and governance disclosures are unclear. No license or registration number is presented in the supplied page evidence; for a cloud-services business this is primarily a disclosure and identity-verification gap rather than, by itself, proof of fraud. The site’s polished corporate content and stated Cloudflare business model therefore cannot be treated as proof that the domain is operated by Cloudflare. Technical transport protection is present, but it establishes encrypted communication rather than operator legitimacy.

EVIDENCE

- The homepage describes cloud networking, CDN, security, edge compute, tiered pricing, and enterprise services but does not provide a verified legal-operator identity in the supplied content.
- Hosting telemetry identifies AS13335, CLOUDFLARENET – Cloudflare, Inc., US.
- The site’s TLS certificate is issued by YE1 at DV validation level and is valid to 2026-12-15.
- The supplied regulatory evidence records the operator identity as unverified and the on-page disclosure state as unclear.

What to Verify Next

Before any interaction beyond passive review, independently confirm that the domain is an official Cloudflare-controlled domain through Cloudflare’s established corporate channels rather than through links or contact details presented by this site. Confirm the legal operator, applicable service terms, and any relevant business registration through authoritative external records. If the homepage’s login, signup, or dashboard functions are encountered, do not submit credentials or connect an existing account unless the domain has been independently authenticated; any downloaded files should likewise be withheld pending security validation.

EVIDENCE

- The homepage presents “Login,” “Dashboard,” “Contact sales,” and “Start building” actions that create sensitive interaction points.
- The homepage links to pricing, documentation, products, and solutions, providing specific pages for independent comparison against official Cloudflare information.
- The supplied analysis records no sensitive form, wallet connection, or hidden form during page behavior testing, so verification should focus on domain ownership and destination authenticity rather than assuming the visible page is safe.

Summary Verdict

The overall posture is **critical trust risk**, with a decisive contradiction between the site's apparent corporate identity and the external malicious and blacklist findings. The website's professional presentation does not establish legitimacy, and its operator identity remains unverified. Sensitive interaction should therefore be treated as inappropriate.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, and the observed addresses were CDN edge servers rather than an exposed origin. This reduces direct origin exposure but is only a mitigating infrastructure characteristic; it does not validate the site's identity or neutralize the external threat findings.

Closing Assessment

The site should be restricted to passive observation while its official ownership and security status are independently confirmed; credentials, account access, downloads, and financial activity should not be conducted through it.

Written analysis generated 2026-10-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

6 findings contributed to this verdict, raised by governance, external reputation, hosting and network, history in the web archive, page content, behaviour in a sandbox.

01 Governance

- A threat feed lists this domain as malicious, and that caps the score whatever the other checks found.

Governance rule:GOV_CRITICAL_BLACKLIST

02 External reputation

- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

03 Hosting and network

- The domain was registered less than three months ago.

Hosting and network rule:DNS_NEW_DOMAIN_90D

04 History in the web archive

- The web archive has almost no record of this domain, which fits a site that is new.

History in the web archive rule:ARCH_PEN_YOUNG_AND_SPARSE

05 Page content

- The page appears to present itself as a known brand it is not verified to belong to.

Page content rule:PAGE_BRAND_SUSPECTED

06 Behaviour in a sandbox

- Most of what the page loaded came from other domains rather than from this one.

Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of zaluposs.com.

- The request for zaluposs.com ended on www.cloudflare.com, a different domain. **WATCH**
- Registration is published under Dominet (HK) Limited. **CLEAR**
- DNS for this domain is served by cloudflare.com, across 2 name servers. **NOTED**
- The registration is paid up to 2027-09-16. **NOTED**
- The earliest public archive of this site is from 2026-09-17. **CLEAR**
- It is hosted on CLOUDFLARENET, from a server in US. **NOTED**

About this assessment

A trust score summarises the evidence TrustSniffer could collect about zaluposs.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
